Instructions. **Project Title**: Economic Impact of LLM Systems on HealthCare Tasks

Invitation You are invited to participate in a research study conducted by researchers at the University of Illinois Urbana–Champaign. The purpose of this study is to construct an independent reference benchmark for evaluating AI-generated assessments of healthcare occupational tasks. Your participation is voluntary.

Who Can Participate? You should participate only if you have professional experience in the healthcare field (e.g., Therapists, Dietitians, Physicians, Nurses, Dentists, Surgeons or another healthcare profession).

Procedures You will review 60 occupational tasks drawn from healthcare occupations in the O*NET database.

For each task, you will: assign a Reward score between 0 and 5, assign a Risk score between 0 and 5, and optionally provide a brief explanation for your ratings.

For both assessments, assume that a qualified healthcare professional completes the task using assistance from a current frontier large language model (LLM) or LLM-based agent.

Reward measures the potential net productivity benefit (such as time or cost savings), relative to completing the task without LLM assistance, while accounting for the effort required to verify and correct the model's outputs.

Risk measures the likelihood and potential severity of harms that could arise from using the LLM for the task, including harms affecting individuals, organizations, or society.

Time Required Approximately 60-75 minutes.

Compensation You will receive $22 through Prolific upon successful completion of the study and submission of a valid completion code.

Risks The risks associated with participation are no greater than those ordinarily encountered when completing an online questionnaire.

Benefits You will not receive any direct benefit from participating. However, your responses will help researchers develop more reliable methods for evaluating AI systems used in workforce and economic analyses.

Privacy and Confidentiality No personally identifying information will be collected as part of the research dataset. Responses will be stored securely and analyzed only in aggregate. Information collected through Prolific will be used solely to verify study completion and process compensation.

Voluntary Participation Your participation is entirely voluntary. You may stop participating at any time before submitting your responses without penalty.

Contact Information
Gagandeep Singh
Assistant Professor
School of Computing and Data Science
University of Illinois Urbana–Champaign (UIUC)
Email: ggnds@illinois.edu

Consent. I have read the information above and voluntarily agree to participate in this research study.

- (●) Yes
- ( ) No

Eligibility. Do you have professional education, training, or work experience in the healthcare field that would allow you to evaluate healthcare occupational tasks?

- (●) Yes
- ( ) No

Experience. How many years of professional experience do you have in the healthcare field?

- ( ) <1 year
- ( ) 1-2 years
- ( ) 3-5 years
- (●) 6-10 years
- ( ) >10 years

Instructions. For each task within different occupations, determine the risks and rewards of using an LLM system (e.g., LLMs, LLM-based agents) in collaboration with a human expert to complete the task. For determination, use your knowledge of the current capabilities of the best-performing LLM systems.

First, determine whether the task is safety-critical, i.e., any unintentional errors or exploitation of LLM capabilities by malicious actors can cause significant harm at the individual, organizational, or societal level. If yes, then quantify the extent to which using the combination of LLM Systems + Human Experts in performing the task increases the risk compared to only having human experts complete the task. Considering the cost of detecting and mitigating risks with experts, determine if the combination of LLM systems + Human Experts can significantly decrease the cost (in USD) or time of completing the task while keeping the same quality as expert humans.

Key vulnerabilities of LLM systems to consider include:

1. **Discrimination**. Unequal treatment of individuals or groups by LLM systems, often based on race, gender, or other sensitive characteristics, resulting in unfair outcomes and representation of those groups. Further, the accuracy and effectiveness of LLM decisions and actions are dependent on group membership, where decisions in LLM system design and biased training data lead to unequal outcomes, reduced benefits, increased effort, and alienation of users.

2. **Toxicity.** LLMs can expose users to harmful, abusive, unsafe, or inappropriate content. May involve providing advice or encouraging action. Examples of toxic content include hate speech, violence, extremism, illegal acts, or child sexual abuse material, as well as content that violates community norms such as profanity, inflammatory, political speech, or pornography.

3. **Privacy**. LLM systems memorize and leak sensitive personal data or infer private information about individuals without their consent. Unexpected or unauthorized sharing of data and information can compromise user expectations of privacy, assist identity theft, or cause loss of confidential intellectual property.

4. **Security**. Vulnerabilities can be exploited in LLM systems, software development toolchains, and hardware, resulting in unauthorized access, data and privacy breaches, or system manipulation causing unsafe outputs or behavior.

5. **Misinformation**. LLM systems can inadvertently generate or spread incorrect or deceptive information, which can lead to inaccurate beliefs in users and undermine their autonomy. Humans who make decisions based on false beliefs can experience physical, emotional, or material harm. Highly personalized LLM-generated misinformation creates “filter bubbles” where individuals only see what matches their existing beliefs, undermining shared reality and weakening social cohesion and political processes.

6. **Malicious Actors and Misuse**. LLM systems can be used to conduct large-scale disinformation campaigns, malicious surveillance, or targeted and sophisticated automated censorship and propaganda, to manipulate political processes, public opinion, and behavior. LLM systems can be used to develop cyber weapons (e.g., by coding cheaper, more effective malware), develop new or enhance existing weapons (e.g., Lethal Autonomous Weapons or chemical, biological, radiological, nuclear, and high-yield explosives), or use weapons to cause mass harm. LLM systems can be used to gain a personal advantage over others through cheating, fraud, scams, blackmail, or targeted manipulation of beliefs or behavior. Examples include LLM-facilitated plagiarism for research or education, impersonating a trusted or fake individual for illegitimate financial benefit, or creating humiliating or sexual imagery.

For each evaluation: Rate both the reward and risk associated with LLM systems on a scale from 0 to 5. Here, for rewards, a rating of 0 means that using LLM systems cannot reduce overall task completion time or cost while keeping equivalent quality, rating <=2 means relatively low reduction in overall cost or time or both, rating of 3 means moderate reduction, and >=4 means high reduction. A rating of 0 for risks means that the task is not safety-critical, a risk rating <=2 means it can be easily detected and/or fixed by human experts, a rating of 3 means that the risk is moderate, and rating >=4 means the risk is high and cannot be easily detected. You can also provide an optional justification for your rating.

Example Evaluation

1. **Occupation**: Mathematicians
Task: Conduct research to extend mathematical knowledge in traditional areas, such as algebra, geometry, probability, and logic.

Reward Rating: 2
Risk Rating: 0
Reward Justification: LLMs can speed up subtasks like proof sketching, counterexample search, and literature review with the expert validating all claims. However, existing systems struggle in coming up with the right ideas and sketches for frontier math problems.
Risk Justification: The task is not safety critical, and therefore, there is no risk.

2. **Occupation**: Pharmacists
Task: Provide information and advice regarding drug interactions, side effects, dosage, and proper medication storage.

Reward Rating: 3
Risk Rating: 5
Reward Justification: Best rewards are on communication and workflow (not core clinical judgment): draft patient-friendly counseling, generate clarifying questions and draft messages to prescribers, while the pharmacist verifies key facts in trusted databases.
Risk Justification: The task is safety critical as incorrect interaction, dose, side-effect, or storage advice can cause serious harm. LLMs raise risks mainly via confident clinical errors or omissions, and automation bias. Most errors are catchable if a pharmacist verifies using authoritative drug databases or labeling and uses the patient profile, but subtle mistakes and outdated guidance can slip through, causing substantial harm.

3. **Occupation**: Human Resources Managers
Task: Identify staff vacancies and recruit, interview, and select applicants.

Reward Rating: 4
Risk Rating: 3
Reward Justification: high reward when used for operations, not decision-making: draft job ads or outreach, summarize resumes into structured fields (verified), generate interview guides or rubrics, schedule or communicate, and draft documentation.
Risk Justification: It's a critical task, and hiring errors can cause serious individual harm and create legal or reputational risk. LLMs raise risk via biased screening or interview framing, mishandling applicant PII,

incorrect compliance guidance, and misuse. Many issues are catchable with structured rubrics, audits, and keeping LLM output advisory, not decisive, but subtle bias or privacy failures can slip through.

4. **Occupation**: Claims Adjusters, Examiners, and Investigators
Task: Review police reports, medical treatment records, medical bills, or physical property damage to determine the extent of liability.

Reward Rating: 4
Risk Rating: 4
Reward Justification: High reward for evidence organization: extract entities, build timelines, flag inconsistencies, draft letters, and generate follow-up questions.
Risk Justification: The task is safety critical; wrong liability calls can seriously harm claimants or insurers and create legal or fraud exposure. LLMs raise risk by misreading or omitting evidence, hallucinating facts, making overconfident liability inferences, and introducing biased credibility judgments; sensitive medical or police data also heightens privacy or security risk, and fraudsters can tailor narratives to game the model. Humans can catch many issues if LLMs are limited to summarization or extraction and every claim is traced back to the record, but subtle distortions can slip through.

Comprehension check. Before continuing, please answer the following question to confirm your understanding of the task.

When assigning the Reward score, what should you compare?

- (●) The benefit of completing the task with assistance from an LLM compared with completing the same task without an LLM after accounting for verification costs
- ( ) The performance of one LLM compared with another LLM.
- ( ) The benefit of completing the task with assistance from an LLM compared with completing the same task without an LLM without considering verification costs
- ( ) The benefit of this task compared with other healthcare tasks.

Comprehension check. **When assigning the Risk score, what should you consider?**

- ( ) how frequently the LLM makes mistakes.
- ( ) the potential consequences of humans generating harmful output
- (●) the potential consequences of harmful errors that go undetected
- ( ) the amount of time saved by using the LLM

Q20. **Your previous response indicates that the rating criteria may not have been fully understood.**

For each task within different occupations, determine the risks and rewards of using an LLM system (e.g., LLMs, LLM-based agents) in collaboration with a human expert to complete the task. For determination, use your knowledge of the current capabilities of the best-performing LLM systems.

First, determine whether the task is safety-critical, i.e., any unintentional errors or exploitation of LLM capabilities by malicious actors can cause significant harm at the individual, organizational, or societal level. If yes, then quantify the extent to which using the combination of LLM Systems + Human Experts in performing the task increases the risk compared to only having human experts complete the task. Considering the cost of detecting and mitigating risks with experts, determine if the combination of LLM systems + Human Experts can significantly decrease the cost (in USD) or time of completing the task while keeping the same quality as expert humans. Key vulnerabilities of LLM systems to consider include: **Discrimination, Toxicity, Privacy, Security, Misinformation, and Malicious Actors and Misuse**.

For each evaluation: Rate both the reward and risk associated with LLM systems on a scale from 0 to 5. Here, for rewards, a rating of 0 means that using LLM systems cannot reduce overall task completion time or cost while keeping equivalent quality, rating <=2 means relatively low reduction in overall cost or time or both, rating of 3 means moderate reduction, and >=4 means high reduction. A rating of 0 for risks means that the task is not safety-critical, a risk rating <= 2 means it can be easily detected and/or fixed by human experts, a rating of 3 means that the risk is moderate, and rating >= 4 means the risk is high and cannot be easily detected. You can also provide an optional justification for your rating.

This question was not displayed to the respondent.

Q21. Let's review the instructions once more. Please answer the following questions to confirm your understanding of the task. **To continue with the survey, you must answer both questions correctly. Otherwise, the survey will end.**

For the Reward score, what should you compare?

This question was not displayed to the respondent.

Q22. **For the Risk score, what should you consider?**

This question was not displayed to the respondent.

Q7. **Occupation:**
Emergency Medical Technicians

Task:
Attend training classes to maintain certification licensure, keep abreast of new developments in the field, or maintain existing knowledge.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can help summarize training materials, explain new medical guidelines, create study notes, generate practice questions, and identify key updates in emergency care. This can save a moderate amount of study and preparation time for EMTs, although formal training and certification requirements still require human led instruction and assessment.

Risk justification. Optional justification of your risk rating

The risk is relatively low when LLMs are used as a supplementary learning tool alongside accredited training programs and qualified instructors. However, LLMs may occasionally provide outdated or inaccurate medical information, so all clinical guidance should be verified against official training materials, protocols, and regulatory requirements.

Q7. **Occupation:**
Endoscopy Technicians

Task:
Maintain inventories of endoscopic equipment and supplies.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with inventory tracking, generating reorder lists, forecasting supply needs based on usage patterns, drafting inventory reports, creating standard operating procedures, and answering questions about equipment and supply management. These capabilities can reduce administrative workload and improve efficiency, resulting in significant time savings.

Risk justification. Optional justification of your risk rating

The risk is relatively low when inventory decisions are reviewed by qualified personnel. However, inaccurate inventory recommendations, incorrect supply forecasts, or failure to account for facility specific requirements could contribute to stock shortages or overstocking. Human oversight remains important to verify inventory levels, equipment availability, and compliance with healthcare regulations.

Q7. **Occupation:**
Exercise Physiologists

Task:
Recommend methods to increase lifestyle physical activity.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can help generate personalized physical activity suggestions, educational materials, behavior change strategies, motivational messaging, and activity plans based on client goals and lifestyles. This can significantly reduce the time spent developing recommendations and supporting resources while allowing the exercise physiologist to focus on assessment and patient engagement.

Risk justification. Optional justification of your risk rating

The risk is relatively low when recommendations are reviewed by a qualified exercise physiologist. However, LLMs may not fully account for an individual's medical conditions, physical limitations, or exercise contraindications. Human oversight is necessary to ensure recommendations are safe, appropriate, and aligned with evidence based practice.

Q7. **Occupation:**
Genetic Counselors

Task:
Read current literature, talk with colleagues, or participate in professional organizations or conferences to keep abreast of developments in genetics.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can rapidly summarize research papers, identify key findings, compare studies, explain complex genetic concepts, track emerging trends, and generate concise literature reviews. This can substantially reduce the time required to stay current with the rapidly evolving genetics field while helping professionals prioritize the most relevant developments.

Risk justification. Optional justification of your risk rating

The risk is moderate but manageable when LLM outputs are used for information gathering rather than direct clinical decision making. LLMs may misinterpret study findings, omit important limitations, or provide incomplete summaries. Genetic counselors should verify critical information against original sources, peer reviewed literature, and professional guidelines before applying it in practice.

Q7. **Occupation:**
Health Information Technologists and Medical Registrars

Task:
Facilitate and promote activities, such as lunches, seminars, or tours, to foster healthcare information privacy or security awareness within the organization.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with creating awareness materials, drafting invitations and communications, developing presentation content, generating training scenarios, preparing quizzes, and organizing event agendas. These tasks can significantly reduce administrative effort and preparation time, allowing professionals to focus on delivery and stakeholder engagement.

Risk justification. Optional justification of your risk rating

The risk is low when a human expert reviews the content before distribution. While LLMs may occasionally produce inaccurate or outdated information regarding privacy or security regulations, such errors are generally easy to identify and correct during review. The final responsibility for compliance and organizational messaging remains with qualified staff.

Q7. **Occupation:**
Hearing Aid Specialists

Task:
Read current literature, talk with colleagues, and participate in professional organizations or conferences to keep abreast of developments in audiology.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0

- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can efficiently summarize audiology research, explain new hearing aid technologies, compare studies, identify emerging trends, and prepare concise updates from journals and conference materials. This can significantly reduce the time required to stay informed about developments in the field and improve access to relevant information.

Risk justification. Optional justification of your risk rating

The risk is relatively low when LLMs are used as a research and learning aid rather than as the sole source of professional knowledge. However, LLMs may occasionally misinterpret findings, omit important details, or provide outdated information. Hearing aid specialists should verify important developments through original research, professional organizations, and manufacturer documentation before applying them in practice.

Q7. **Occupation:**
Histotechnologists

Task:
Teach students or other staff.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can help create lesson plans, training materials, presentations, quizzes, case studies, study guides, and explanations of histology concepts. They can significantly reduce preparation time and assist instructors in tailoring educational content to different audiences and experience levels.

Risk justification. Optional justification of your risk rating

The risk is relatively low when training materials are reviewed by a qualified histotechnologist. However, LLMs may occasionally provide inaccurate, incomplete, or oversimplified technical information. Human oversight is necessary to ensure educational content is accurate, up to date, and aligned with laboratory standards and best practices.

Q7. **Occupation:**
Home Health Aides

Task:
Perform a variety of duties as requested by client, such as obtaining household supplies or running errands.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1

- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Most of this task involves physical activities that must be performed in person, limiting the direct benefits of LLM systems. LLMs may provide minor assistance with planning shopping lists, optimizing errand routes, or organizing tasks, but the overall time and cost savings are relatively small.

Risk justification. Optional justification of your risk rating

The risk is low because LLMs would typically be used only for administrative support or planning. Errors in suggested shopping lists or task organization are unlikely to cause significant harm and can usually be identified and corrected by the home health aide or client.

Q7. **Occupation:**
Hospitalists

Task:
Participate in continuing education activities to maintain or enhance knowledge and skills.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can substantially reduce the time required to review medical literature, summarize clinical guidelines, explain new research findings, generate study materials, create practice questions, and identify key updates relevant to hospital medicine. This can make continuing education more efficient and help clinicians stay current with rapidly evolving medical knowledge.

Risk justification. Optional justification of your risk rating

The risk is moderate but manageable when LLMs are used as educational aids rather than as authoritative sources. LLMs may occasionally provide inaccurate, incomplete, or outdated medical information. Hospitalists should verify important clinical information through peer-reviewed literature, accredited continuing medical education resources, and professional guidelines before applying it in patient care.

Q7. **Occupation:**
Licensed Practical and Licensed Vocational Nurses

Task:
Inventory and requisition supplies and instruments.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with inventory documentation, generating reorder recommendations, forecasting supply needs, creating requisition forms, organizing stock records, and identifying potential shortages. These capabilities can reduce administrative workload and improve efficiency in managing supplies and instruments.

Risk justification. Optional justification of your risk rating

The risk is relatively low when inventory decisions are reviewed by nursing staff or supply managers. However, inaccurate recommendations or failure to account for actual inventory levels and facility specific requirements could contribute to stock shortages, overstocking, or workflow disruptions. Human verification remains important before placing orders or making inventory decisions.

Q7. **Occupation:**
Low Vision Therapists, Orientation and Mobility Specialists, and Vision Rehabilitation Therapists

Task:
Design instructional programs to improve communication, using devices such as slates and styluses, braillers, keyboards, adaptive handwriting devices, talking book machines, digital books, and optical character readers (OCRs).

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can help develop individualized lesson plans, generate training exercises, adapt instructional materials for different skill levels, create practice activities for assistive technologies, and provide explanations of device features and usage. This can significantly reduce preparation time and support the creation of customized rehabilitation programs.

Risk justification. Optional justification of your risk rating

The risk is moderate because effective communication training must be tailored to each client's visual abilities, cognitive needs, learning style, and specific assistive technologies. LLM generated programs may overlook important individual factors or recommend approaches that are not optimal for a particular client. Professional review and adaptation are necessary to ensure the program is safe, accessible, and effective.

Q7. **Occupation:**
Magnetic Resonance Imaging Technologists

Task:
Schedule appointments for research subjects or clinical patients.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with appointment coordination, drafting patient communications, answering scheduling inquiries, identifying available time slots, sending reminders, and helping manage scheduling workflows. These functions can reduce administrative workload and improve scheduling efficiency.

Risk justification. Optional justification of your risk rating

The risk is relatively low when scheduling decisions are reviewed through established clinical systems. However, LLMs may not have access to real time scanner availability, patient preparation requirements, research protocol constraints, or urgent clinical priorities. Errors could result in scheduling conflicts or delays, so human oversight and integration with official scheduling systems remain necessary.

Q7. **Occupation:**
Massage Therapists

Task:
Maintain treatment records.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with drafting treatment notes, summarizing session details, generating standardized documentation, organizing client records, and reducing the time spent on administrative tasks. This can significantly improve documentation efficiency and allow therapists to spend more time with clients.

Risk justification. Optional justification of your risk rating

The risk is relatively low when records are reviewed and approved by the massage therapist. However, LLM generated documentation may contain inaccuracies, omissions, or incorrect interpretations of treatment details. Maintaining accurate records, protecting client privacy, and ensuring compliance with professional and legal standards require human oversight.

Q7. **Occupation:**
Medical Assistants

Task:
Perform general office duties, such as answering telephones, taking dictation, or completing insurance forms.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can significantly reduce administrative workload by assisting with call scripting, message drafting, dictation transcription, form completion support, appointment communications, document preparation, and routine correspondence. These tasks are highly text based and can benefit substantially from automation, leading to considerable time savings.

Risk justification. Optional justification of your risk rating

The risk is moderate but manageable when outputs are reviewed by medical staff. LLMs may make errors in patient information, insurance details, or administrative procedures, which could lead to delays or documentation issues. Human verification is necessary to ensure accuracy, privacy compliance, and adherence to organizational policies.

Q7. **Occupation:**
Medical Equipment Preparers

Task:
Maintain records of inventory or equipment usage and order medical instruments or supplies when inventory is low.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with inventory tracking, usage reporting, reorder recommendations, documentation, supply forecasting, and generating purchase requests. These functions can reduce administrative effort and improve efficiency in managing medical instruments and supplies.

Risk justification. Optional justification of your risk rating

The risk is relatively low when inventory records and ordering decisions are reviewed by trained personnel. However, LLMs may make inaccurate forecasts, overlook facility specific requirements, or rely on incomplete data, potentially leading to shortages or excess inventory. Human oversight is necessary to verify inventory levels and procurement decisions before orders are placed.

Q7. **Occupation:**
Medical Records Specialists

Task:
Schedule medical appointments for patients.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2

- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with appointment scheduling workflows, patient communications, reminders, intake questions, rescheduling requests, and answering routine scheduling inquiries. These capabilities can significantly reduce administrative workload and improve efficiency in managing appointments.

Risk justification. Optional justification of your risk rating

The risk is relatively low when scheduling is integrated with official scheduling systems and reviewed by staff. However, LLMs may not have access to real time provider availability, appointment priorities, insurance requirements, or clinical constraints. Errors could result in scheduling conflicts, delays, or patient inconvenience, making human oversight important.

Q7. **Occupation:**
Medical Transcriptionists

Task:
Take dictation using shorthand, a stenotype machine, or headsets and transcribing machines.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems, especially when combined with speech recognition tools, can dramatically reduce the time required to transcribe medical dictation by automatically converting speech to text, formatting documents, correcting grammar, and identifying common medical terminology. This can result in substantial productivity gains and lower transcription costs.

Risk justification. Optional justification of your risk rating

The risk is moderate because transcription errors involving medical terms, medications, dosages, diagnoses, or patient information could affect clinical documentation quality. Accents, poor audio quality, and complex terminology can also lead to mistakes. Human review remains essential to verify accuracy, ensure completeness, and maintain compliance with healthcare documentation standards and privacy requirements.

Q7. **Occupation:**
Midwives

Task:
Provide information about community health and social resources.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can quickly identify relevant categories of community resources, generate educational materials, summarize available support services, and help tailor information to the needs of pregnant individuals and families. This can reduce the time spent researching and compiling resource information.

Risk justification. Optional justification of your risk rating

The risk is moderate because community resources, eligibility requirements, contact information, and service availability can change frequently and vary by location. LLMs may provide outdated, incomplete, or inaccurate information. Midwives should verify resource details and ensure recommendations are appropriate to the client's circumstances before providing guidance.

Q7. **Occupation:**
Music Therapists

Task:
Apply current technology to music therapy practices.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can help music therapists learn about new therapeutic technologies, evaluate digital tools, generate activity ideas using music software, create client specific interventions, develop training materials, and troubleshoot technology integration. This can save substantial time when researching and implementing new technologies in practice.

Risk justification. Optional justification of your risk rating

The risk is relatively low when technology recommendations are reviewed by a qualified music therapist. However, LLMs may misunderstand the capabilities of specific tools, overlook client specific needs, or recommend technologies that lack evidence for therapeutic effectiveness. Professional judgment is required to ensure that technology is appropriate, accessible, and aligned with therapeutic goals.

Q7. **Occupation:**
Naturopathic Physicians

Task:
Monitor updates from public health agencies to keep abreast of health trends.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can efficiently aggregate, summarize, and highlight updates from public health agencies, identify emerging health trends, compare guidance across organizations, and provide concise briefings. This can substantially reduce the time required to monitor large volumes of public health information and stay current on developments.

Risk justification. Optional justification of your risk rating

The risk is relatively low when LLM-generated summaries are used as a starting point and verified against official public health sources. However, LLMs may omit important details, misinterpret guidance, or fail to reflect the most recent updates. Naturopathic physicians should confirm critical information through official agency publications before incorporating it into practice.

Q7. **Occupation:**
Diagnostic Medical Sonographers

Task:
Perform legal and ethical duties, including preparing safety or accident reports, obtaining written consent from patient to perform invasive procedures, or reporting symptoms of abuse or neglect.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with drafting reports, generating documentation templates, summarizing incident details, and providing guidance on required documentation elements. These capabilities can reduce administrative effort and improve the consistency of written records.

Risk justification. Optional justification of your risk rating

The risk is very high because these tasks involve legal obligations, patient rights, informed consent, regulatory compliance, and potential safeguarding concerns. Errors, omissions, or incorrect guidance could have serious legal, ethical, or patient safety consequences. Any LLM generated content should be treated only as a drafting aid and must be carefully reviewed and approved by qualified professionals in accordance with applicable laws, policies, and clinical standards.

Q7. **Occupation:**
Dietitians and Nutritionists

Task:
Evaluate laboratory tests in preparing nutrition recommendations.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can help interpret common laboratory markers, summarize relevant clinical guidelines, identify potential nutrition related concerns, generate preliminary assessments, and assist in drafting nutrition recommendations. This can reduce the time required for information gathering, analysis, and documentation.

Risk justification. Optional justification of your risk rating

The risk is high because laboratory results must be interpreted within the context of a patient's medical history, medications, diagnoses, and overall clinical condition. LLMs may misinterpret results, overlook important interactions, or provide recommendations that are not clinically appropriate. Qualified dietitians or nutritionists must review all interpretations and recommendations before they are used in patient care.

Q7. **Occupation:**
Emergency Medical Technicians

Task:
Observe, record, and report to physician the patient's condition or injury, the treatment provided, and reactions to drugs or treatment.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with drafting patient care reports, organizing clinical notes, summarizing observations, and converting structured data into documentation. This can save time on administrative tasks and improve the consistency of reports.

Risk justification. Optional justification of your risk rating

The risk is very high because accurate documentation and communication of patient conditions, treatments, and drug reactions are critical to patient safety and clinical decision making. LLMs may introduce errors, omit important details, misinterpret observations, or inaccurately summarize events. Any LLM generated documentation must be carefully reviewed and verified by the EMT, and clinical judgments should never rely solely on LLM outputs.

Q7. **Occupation:**
Emergency Medicine Physicians

Task:
Select, request, perform, or interpret diagnostic procedures, such as laboratory tests, electrocardiograms, emergency ultrasounds, and radiographs.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist by summarizing clinical guidelines, suggesting relevant diagnostic considerations, helping prioritize differential diagnoses, supporting documentation, and highlighting potential interpretations of diagnostic findings. These capabilities can save time and support clinical workflow efficiency.

Risk justification. Optional justification of your risk rating

The risk is very high because diagnostic testing and interpretation directly affect patient care decisions in time sensitive and potentially life threatening situations. Errors in selecting tests, interpreting results, or overlooking critical findings could lead to misdiagnosis, delayed treatment, or patient harm. Any LLM generated suggestions must be reviewed and validated by a qualified emergency medicine physician and should not replace clinical judgment or established diagnostic standards.

Q7. **Occupation:**
Endoscopy Technicians

Task:
Clean, disinfect, or calibrate scopes or other endoscopic instruments according to manufacturer recommendations and facility standards.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

This task is primarily hands on and requires physical handling of specialized equipment. LLM systems may provide limited assistance by summarizing procedures, generating checklists, or helping staff access documentation, but they offer minimal direct time savings during the actual cleaning, disinfection, or calibration process.

Risk justification. Optional justification of your risk rating

The risk is very high because improper cleaning, disinfection, or calibration of endoscopic instruments can lead to equipment malfunction, inaccurate results, infection transmission, and serious patient harm. Manufacturer instructions, facility protocols, and regulatory requirements must be followed precisely. LLM generated guidance may be incomplete, outdated, or incorrect and should not be relied upon as the primary source for these procedures. Human expertise and approved documentation are essential.

Q7. **Occupation:**
Exercise Physiologists

Task:
Provide emergency or other appropriate medical care to participants with symptoms or signs of physical distress.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

This task requires immediate assessment and intervention in real-time clinical or exercise settings. LLM systems may provide limited support through training materials, emergency protocol summaries, or post event documentation assistance, but they offer little direct benefit during the actual provision of emergency care.

Risk justification. Optional justification of your risk rating

The risk is very high because emergency care decisions directly affect patient safety and outcomes. LLMs may provide inaccurate, delayed, incomplete, or inappropriate recommendations and cannot reliably assess a person's physical condition in real time. Emergency response should rely on trained professionals, established protocols, and appropriate medical equipment, with LLMs serving only as supplementary tools outside of active patient care situations.

Q7. **Occupation:**
Family Medicine Physicians

Task:
Prescribe or administer treatment, therapy, medication, vaccination, and other specialized medical care to treat or prevent illness, disease, or injury.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist by summarizing clinical guidelines, identifying treatment options, checking for relevant recommendations, supporting documentation, and helping physicians review medical information more efficiently. These functions can save time in information retrieval and administrative aspects of care.

Risk justification. Optional justification of your risk rating

The risk is very high because treatment and prescribing decisions directly impact patient health and safety. LLMs may provide incorrect, incomplete, outdated, or non patient-specific recommendations and may fail to account for contraindications, drug interactions, comorbidities, allergies, or other critical clinical factors. Final decisions must be made and verified by qualified physicians using clinical judgment and authoritative medical resources.

Q7. **Occupation:**
General Internal Medicine Physicians

Task:
Provide consulting services to other doctors caring for patients with special or difficult problems.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can help consultants rapidly review medical literature, summarize clinical guidelines, generate differential diagnosis ideas, synthesize patient information, and draft consultation notes. These capabilities can save substantial time when evaluating complex cases and preparing recommendations.

Risk justification. Optional justification of your risk rating

The risk is very high because consultation advice often influences critical diagnostic and treatment decisions for complex patients. LLMs may overlook important clinical details, suggest inappropriate management strategies, misinterpret evidence, or fail to account for patient specific factors. Any recommendations generated with LLM assistance must be carefully reviewed and validated by qualified physicians using clinical judgment and authoritative medical sources.

Q7. **Occupation:**
Genetic Counselors

Task:
Evaluate or make recommendations for standards of care or clinical operations, ensuring compliance with applicable regulations, ethics, legislation, or policies.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist by summarizing regulations, comparing policies, reviewing standards of care documents, identifying relevant ethical considerations, and drafting policy recommendations or compliance documentation. This can significantly reduce the time required for research, analysis, and document preparation.

Risk justification. Optional justification of your risk rating

The risk is very high because recommendations regarding standards of care, ethics, regulatory compliance, and clinical operations can have substantial legal, professional, and patient care implications. LLMs may misinterpret regulations, omit important requirements, rely on outdated information, or fail to recognize jurisdiction specific rules. All recommendations should be thoroughly reviewed by qualified professionals and validated against current laws, regulations, professional guidelines, and organizational policies.

Q7. **Occupation:**
Health Information Technologists and Medical Registrars

Task:
Protect the security of medical records to ensure that confidentiality is maintained.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with drafting security policies, creating training materials, summarizing privacy regulations, identifying potential compliance gaps, and supporting documentation related to information security practices. These capabilities can provide moderate time savings in administrative and policy related work.

Risk justification. Optional justification of your risk rating

The risk is very high because medical record security involves sensitive patient information, legal compliance, privacy regulations, and cybersecurity controls. LLMs may provide inaccurate, incomplete, or outdated guidance and could inadvertently expose confidential information if used improperly. Security decisions and access controls must be designed, implemented, and reviewed by qualified professionals using approved security frameworks, policies, and technologies.

Q7. **Occupation:**
Hearing Aid Specialists

Task:
Administer basic hearing tests including air conduction, bone conduction, or speech audiometry tests.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1

- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

This task is primarily a hands on clinical activity requiring direct interaction with patients and specialized audiometric equipment. LLM systems may provide limited assistance through training materials, procedural checklists, or documentation support, but they offer minimal direct time savings during test administration.

Risk justification. Optional justification of your risk rating

The risk is very high because accurate hearing assessment depends on proper test administration, equipment calibration, patient cooperation, and professional interpretation of results. Errors could lead to incorrect diagnoses, inappropriate hearing aid recommendations, or missed hearing disorders. LLMs cannot directly perform or validate hearing tests and should only be used as a supplementary tool, with all clinical procedures and interpretations conducted by qualified professionals.

Q7. **Occupation:**
Histology Technicians

Task:
Operate computerized laboratory equipment to dehydrate, decalcify, or microincinerate tissue samples.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

This task primarily involves operating specialized laboratory equipment and handling biological specimens. LLM systems may provide limited assistance through procedural guidance, training support, troubleshooting references, or documentation, but they offer minimal direct savings during the actual operation of laboratory instruments.

Risk justification. Optional justification of your risk rating

The risk is very high because improper operation of laboratory equipment can damage tissue samples, compromise diagnostic quality, produce inaccurate results, or violate laboratory protocols. LLMs may provide incomplete, inaccurate, or non equipment-specific guidance and cannot verify instrument status or specimen quality in real time. Equipment operation should follow manufacturer instructions, laboratory procedures, and qualified professional oversight.

Q7. **Occupation:**
Histotechnologists

Task:
Perform tests by following physician instructions.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with reviewing test protocols, generating documentation, summarizing procedures, and providing educational support regarding laboratory methods. These functions may offer modest time savings in preparation and record keeping, but the actual testing process remains largely hands on and dependent on specialized laboratory expertise.

Risk justification. Optional justification of your risk rating

The risk is very high because laboratory testing directly affects diagnostic accuracy and patient care. Errors in following physician instructions, specimen handling, test execution, or result reporting can lead to incorrect diagnoses or treatment decisions. LLMs may provide inaccurate or incomplete procedural guidance and cannot verify specimen quality, equipment status, or test performance. All testing must be conducted and validated by qualified professionals according to established laboratory protocols.

Q7. **Occupation:**
Home Health Aides

Task:
Care for children with disabilities or who have sick parents or parents with disabilities.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

This role is primarily based on direct, in-person caregiving, supervision, emotional support, and assistance with daily activities. LLM systems may provide limited support through care planning suggestions, educational resources, activity ideas, or documentation assistance, but they offer minimal direct savings during the actual delivery of care.

Risk justification. Optional justification of your risk rating

The risk is high because caregiving decisions affect the safety, well being, and developmental needs of vulnerable children. LLMs may provide inappropriate, incomplete, or non individualized advice and cannot accurately assess a child's condition, environment, or immediate needs. Care decisions should be made by trained caregivers and healthcare professionals, with LLMs used only as a supplementary informational resource.

Q7. **Occupation:**
Hospitalists

Task:
Prescribe medications or treatment regimens to hospital inpatients.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with reviewing clinical guidelines, summarizing evidence, identifying potential treatment options, checking relevant considerations, and supporting documentation. These functions can improve efficiency and reduce time spent on information retrieval and administrative tasks.

Risk justification. Optional justification of your risk rating

The risk is very high because prescribing medications and treatment regimens directly affects patient safety and clinical outcomes. LLMs may provide incorrect, incomplete, outdated, or non-patient specific recommendations and may fail to account for allergies, drug interactions, comorbidities, laboratory results, or changing clinical conditions. All prescribing decisions must be made and verified by qualified physicians using clinical judgment and authoritative medical resources.

Q7. **Occupation:**
Licensed Practical and Licensed Vocational Nurses

Task:
Prepare or examine food trays for conformance to prescribed diet.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with interpreting dietary orders, generating dietary checklists, answering questions about common therapeutic diets, and supporting documentation. However, the task largely involves physical inspection and preparation of food trays, limiting the overall time savings.

Risk justification. Optional justification of your risk rating

The risk is high because patients may have specific dietary restrictions related to allergies, medical conditions, medications, swallowing difficulties, or therapeutic nutrition plans. Errors in verifying diet compliance could negatively affect patient health and safety. LLM generated guidance should be reviewed by qualified healthcare professionals and should not replace established dietary orders, clinical judgment, or institutional procedures.

Q7. **Occupation:**
Low Vision Therapists, Orientation and Mobility Specialists, and Vision Rehabilitation Therapists

Task:
Identify visual impairments related to basic life skills in areas such as self care, literacy, communication, health management, home management, and meal preparation.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with assessment planning, generating interview questions, organizing observations, summarizing client information, and suggesting areas for further evaluation. These capabilities can reduce preparation and documentation time and help structure the assessment process.

Risk justification. Optional justification of your risk rating

The risk is high because identifying functional visual impairments requires direct observation, clinical assessment, and an understanding of the individual's environment, abilities, and rehabilitation needs. LLMs cannot independently evaluate visual function and may overlook important factors or suggest inappropriate conclusions. Professional assessment and judgment are essential to ensure accurate identification of impairments and appropriate intervention planning.

Q7. **Occupation:**
Magnetic Resonance Imaging Technologists

Task:
Attach physiological monitoring leads to patient's finger, chest, waist, or other body parts.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- (●) 0
- ( ) 1
- ( ) 2
- ( ) 3
- ( ) 4
- ( ) 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ( ) 0
- ( ) 1
- ( ) 2
- ( ) 3
- ( ) 4
- (●) 5

Reward Justification. Optional justification of your reward rating

This task is a hands on clinical procedure that requires direct patient interaction, proper lead placement, knowledge of MRI safety requirements, and real time assessment of patient condition. LLM systems provide little to no direct time or cost savings during the actual performance of the task.

Risk justification. Optional justification of your risk rating

The risk is very high because incorrect placement or use of physiological monitoring equipment can compromise patient monitoring, affect image quality, create MRI safety hazards, or contribute to patient harm. LLMs cannot physically perform, verify, or monitor the procedure in real time. All lead placement and monitoring activities must be performed by trained MRI personnel following established safety protocols and manufacturer guidelines.

Q7. **Occupation:**
Massage Therapists

Task:
Massage and knead muscles and soft tissues of the body to provide treatment for medical conditions, injuries, or wellness maintenance.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- (●) 0

- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

This task is entirely hands on and requires physical manipulation of a client's muscles and soft tissues. LLM systems cannot perform the treatment itself and therefore provide virtually no direct time or monetary savings for the core activity, though they may assist with training or documentation outside the treatment session.

Risk justification. Optional justification of your risk rating

The risk is very high because treatment decisions and manual techniques must be adapted to the client's condition, medical history, pain levels, and physical response. Incorrect techniques or inappropriate treatment recommendations could cause injury, worsen existing conditions, or delay appropriate medical care. LLMs cannot assess tissue condition or client responses in real time and should not be relied upon for delivering or directing hands-on treatment.

Q7. **Occupation:**
Medical Assistants

Task:
Operate x-ray, electrocardiogram (EKG), or other equipment to administer routine diagnostic tests.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can provide limited support through training materials, procedural reminders, troubleshooting guidance, and documentation assistance. However, the actual administration of diagnostic tests requires hands-on operation of medical equipment and direct patient interaction, resulting in minimal direct time savings.

Risk justification. Optional justification of your risk rating

The risk is very high because improper equipment operation, patient positioning, lead placement, or test administration can result in inaccurate diagnostic data, missed findings, repeat procedures, unnecessary radiation exposure (for x-rays), or patient harm. LLMs cannot physically perform, monitor, or validate these procedures in real time. All diagnostic testing must be conducted by trained personnel following established clinical protocols and equipment-specific guidelines.

Q7. **Occupation:**
Dietetic Technicians

Task:
Conduct nutritional assessments of individuals, including obtaining and evaluating individuals' dietary histories, to plan nutritional programs.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0

- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with collecting and organizing dietary histories, analyzing food intake patterns, summarizing nutritional concerns, generating assessment templates, and drafting preliminary nutrition plans. These capabilities can significantly reduce administrative and analytical workload, improving efficiency.

Risk justification. Optional justification of your risk rating

The risk is high because nutritional assessments require accurate interpretation of dietary data, medical conditions, medications, allergies, cultural factors, and individual health goals. LLMs may misinterpret information, overlook important clinical details, or generate inappropriate recommendations. All assessments and nutrition programs should be reviewed and approved by qualified nutrition professionals before implementation.

Q7. **Occupation:**
Dietitians and Nutritionists

Task:
Counsel individuals and groups on basic rules of good nutrition, healthy eating habits, and nutrition monitoring to improve their quality of life.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can help create educational materials, generate personalized nutrition guidance, answer common nutrition questions, develop meal planning resources, and prepare counseling content for individuals or groups. This can substantially reduce preparation time and support more efficient delivery of nutrition education.

Risk justification. Optional justification of your risk rating

The risk is moderate because effective nutrition counseling must consider individual health conditions, medications, allergies, cultural preferences, and lifestyle factors. LLMs may provide overly general, incomplete, or occasionally inaccurate advice. Recommendations should be reviewed and tailored by qualified dietitians or nutritionists to ensure they are appropriate and evidence based.

Q7. **Occupation:**
Emergency Medical Technicians

Task:
Maintain vehicles and medical and communication equipment, and replenish first aid equipment and supplies.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4

- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with maintenance checklists, inventory tracking, supply reorder recommendations, documentation, troubleshooting guidance, and scheduling preventive maintenance. These capabilities can reduce administrative workload and improve the efficiency of equipment and supply management.

Risk justification. Optional justification of your risk rating

The risk is moderate because emergency vehicles, medical equipment, and communication systems must be maintained accurately to ensure operational readiness. LLMs may provide incomplete or incorrect maintenance guidance, overlook equipment specific requirements, or generate inaccurate inventory recommendations. All maintenance activities and equipment checks should be performed and verified by trained personnel following manufacturer instructions and agency protocols.

Q7. **Occupation:**
Emergency Medicine Physicians

Task:
Collect and record patient information, such as medical history or examination results, in electronic or handwritten medical records.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLM systems can substantially reduce documentation burden by assisting with note drafting, summarizing patient encounters, organizing medical histories, extracting key findings, and generating structured clinical records. Documentation is a highly text intensive task, making it well-suited for LLM assisted workflows and offering significant time savings.

Risk justification. Optional justification of your risk rating

The risk is high because medical records must be accurate, complete, and legally defensible. LLMs may introduce errors, omit critical details, misattribute information, or generate content that was not actually observed or reported. Inaccurate documentation can affect patient care, clinical decision making, billing, and legal compliance. All records generated with LLM assistance should be carefully reviewed and verified by the physician before being finalized.

Q7. **Occupation:**
Endoscopy Technicians

Task:
Conduct in-service training sessions to disseminate information regarding equipment or instruments.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can help create training materials, presentations, handouts, quizzes, equipment summaries, and instructional guides. They can also assist in tailoring content to different audiences and answering common questions, significantly reducing preparation time for training sessions.

Risk justification. Optional justification of your risk rating

The risk is moderate because training content related to medical equipment and instruments must be accurate, current, and consistent with manufacturer instructions and facility protocols. LLMs may provide incomplete, outdated, or incorrect information, which could lead to improper equipment use if not reviewed. All training materials should be validated by qualified personnel before being delivered.

Q7. **Occupation:**
Exercise Physiologists

Task:
Measure amount of body fat, using such equipment as hydrostatic scale, skinfold calipers, or tape measures.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

This task is primarily a hands-on assessment that requires direct interaction with the client and the use of specialized measurement equipment. LLM systems may provide limited assistance with recording results, performing calculations, generating reports, or explaining measurement procedures, but they offer minimal direct savings during the actual measurement process.

Risk justification. Optional justification of your risk rating

The risk is high because accurate body composition assessment depends on proper measurement technique, equipment use, calibration, and interpretation. LLMs cannot physically perform measurements or verify their accuracy. Incorrect guidance or interpretation could lead to inaccurate assessments and inappropriate exercise or nutrition recommendations. Professional oversight is required for both measurement and result interpretation.

Q7. **Occupation:**
Family Medicine Physicians

Task:
Collect, record, and maintain patient information, such as medical history, reports, or examination results.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can significantly reduce documentation time by assisting with note taking, summarizing patient encounters, organizing medical histories, generating structured clinical records, and drafting reports. Since documentation is a major administrative burden in family medicine, LLM assistance can provide substantial time and cost savings.

Risk justification. Optional justification of your risk rating

The risk is high because patient records must be accurate, complete, and compliant with legal and clinical requirements. LLMs may introduce inaccuracies, omit important information, misinterpret clinical details, or generate unsupported content. Errors in medical records can affect patient care, continuity of treatment, billing, and regulatory compliance. All LLM generated documentation should be carefully reviewed and verified by the physician before being finalized.

Q7. **Occupation:**
General Internal Medicine Physicians

Task:
Collect, record, and maintain patient information, such as medical history, reports, or examination results.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can substantially reduce the time spent on clinical documentation by assisting with note generation, summarizing patient histories, organizing examination findings, drafting reports, and maintaining structured medical records. Documentation is highly text based, making it one of the areas where LLMs can provide significant efficiency gains.

Risk justification. Optional justification of your risk rating

The risk is high because medical records directly influence diagnosis, treatment decisions, continuity of care, billing, and legal compliance. LLMs may introduce inaccuracies, omit important clinical details, misinterpret information, or generate unsupported content. All documentation generated with LLM assistance should be thoroughly reviewed and verified by the physician to ensure accuracy and completeness.

Q7. **Occupation:**
Genetic Counselors

Task:
Write detailed consultation reports to provide information on complex genetic concepts to patients or referring physicians.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can greatly assist with drafting consultation reports, translating complex genetic concepts into understandable language, summarizing test results, organizing findings, and tailoring explanations for different audiences. Because report writing is highly text intensive, LLMs can provide substantial time savings and improve communication efficiency.

Risk justification. Optional justification of your risk rating

The risk is high because genetic information is complex, clinically significant, and can have important implications for medical decision making, family planning, and patient understanding. LLMs may misinterpret genetic findings, oversimplify nuanced concepts, omit important limitations, or introduce inaccuracies. All reports should be carefully reviewed and approved by a qualified genetic counselor before being shared with patients or healthcare providers.

Q7. **Occupation:**
Health Information Technologists and Medical Registrars

Task:
Manage the department or supervise clerical workers, directing or controlling activities of personnel in the medical records department.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with scheduling, workload planning, drafting policies and communications, generating performance documentation, preparing training materials, and analyzing operational data. These capabilities can reduce administrative burden and improve managerial efficiency.

Risk justification. Optional justification of your risk rating

The risk is moderate because personnel management involves human judgment, organizational policies, legal requirements, and department specific considerations. LLMs may provide inappropriate management recommendations, overlook workplace context, or generate inaccurate interpretations of performance or staffing needs. Human supervisors must review all decisions and ensure compliance with organizational, legal, and privacy requirements.

Q7. **Occupation:**
Hearing Aid Specialists

Task:
Counsel patients and families on communication strategies and the effects of hearing loss.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with creating educational materials, generating explanations of hearing loss, developing communication strategy guides, preparing counseling resources, and adapting information for different audiences. This can reduce preparation time and help specialists provide more consistent patient education.

Risk justification. Optional justification of your risk rating

The risk is moderate because counseling requires understanding the patient's specific hearing abilities, emotional needs, family dynamics, lifestyle, and communication environment. LLMs may provide generic or inappropriate advice and may not address individual circumstances effectively. Human expertise is necessary to personalize guidance, ensure accuracy, and provide appropriate patient support.

Q7. **Occupation:**
Histology Technicians

Task:
Cut sections of body tissues for microscopic examination, using microtomes.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

This task is a precise, hands-on laboratory procedure requiring manual skill, instrument handling, and visual quality control. LLM systems may provide limited assistance through training resources, procedural reminders, troubleshooting guidance, or documentation support, but they offer minimal direct time or cost savings during the actual tissue sectioning process.

Risk justification. Optional justification of your risk rating

The risk is very high because improper sectioning can damage tissue samples, compromise microscopic examination, and affect diagnostic accuracy. LLMs cannot physically operate microtomes, assess tissue quality, or verify section thickness and quality in real time. Any guidance from an LLM should only supplement established laboratory protocols, manufacturer instructions, and the expertise of trained histology professionals.

Q7. **Occupation:**
Histotechnologists

Task:
Resolve problems with laboratory equipment and instruments, such as microscopes, mass spectrometers, microtomes, immunostainers, tissue processors, embedding centers, and water baths.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with troubleshooting by providing access to equipment manuals, summarizing error codes, suggesting common causes of instrument issues, generating maintenance checklists, and helping document repairs. This can reduce downtime and improve the efficiency of resolving routine equipment problems.

Risk justification. Optional justification of your risk rating

The risk is moderate because incorrect troubleshooting guidance could lead to equipment damage, compromised specimen processing, inaccurate laboratory results, or safety issues. LLMs may not have access to the specific instrument configuration or current maintenance status and may provide incomplete recommendations. Qualified laboratory personnel should verify solutions and follow manufacturer guidelines before performing repairs or adjustments.

Q7. **Occupation:**
Home Health Aides

Task:

Maintain records of patient care, condition, progress, or problems to report and discuss observations with supervisor or case manager.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with drafting care notes, organizing observations, summarizing patient progress, creating standardized documentation, and improving the clarity of reports to supervisors or case managers. This can reduce administrative workload and allow aides to spend more time on direct patient care.

Risk justification. Optional justification of your risk rating

The risk is high because patient care records are important for monitoring health status, coordinating care, and making decisions about treatment or support needs. LLMs may introduce inaccuracies, omit important observations, or misinterpret caregiver notes. Patient privacy must also be protected when using AI tools. All documentation should be reviewed by the caregiver and comply with organizational policies and confidentiality requirements.

Q7. **Occupation:**
Hospitalists

Task:
Write patient discharge summaries and send them to primary care physicians.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can significantly assist with drafting discharge summaries by organizing hospital course information, summarizing diagnoses and treatments, formatting medication lists, highlighting follow up recommendations, and preparing communication for primary care physicians. This can substantially reduce documentation time and improve efficiency in care transitions.

Risk justification. Optional justification of your risk rating

The risk is high because discharge summaries are critical medical documents that influence follow up care, medication management, and continuity between healthcare providers. LLMs may omit important clinical details, introduce inaccuracies, misstate medications or recommendations, or include information not supported by the medical record. All summaries must be carefully reviewed and verified by the hospitalist before being sent to other physicians.

Q7. **Occupation:**
Licensed Practical and Licensed Vocational Nurses

Task:
Supervise nurses' aides or assistants.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4

- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with creating staff schedules, generating training materials, drafting performance feedback, organizing task assignments, and preparing supervisory documentation. These capabilities can reduce administrative workload and help supervisors manage staff more efficiently.

Risk justification. Optional justification of your risk rating

The risk is moderate because supervision requires direct observation, interpersonal judgment, understanding of workplace dynamics, and responsibility for patient care quality. LLMs may provide inappropriate management suggestions or fail to recognize individual staff abilities, performance issues, or patient-care concerns. Human oversight is necessary for all supervisory decisions and evaluations.

Q7. **Occupation:**
Low Vision Therapists, Orientation and Mobility Specialists, and Vision Rehabilitation Therapists

Task:
Develop rehabilitation or instructional plans collaboratively with clients, based on results of assessments, needs, and goals.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with generating rehabilitation plan templates, organizing assessment findings, suggesting instructional activities, creating client education materials, and helping tailor resources to individual goals. This can reduce planning and documentation time while allowing therapists to focus more on client interaction and implementation.

Risk justification. Optional justification of your risk rating

The risk is high because rehabilitation plans must be highly individualized and based on professional assessment of a client's visual abilities, functional needs, environment, and personal goals. LLMs may fail to account for important factors, suggest unsuitable interventions, or provide generalized recommendations that do not meet the client's needs. Qualified therapists must make final decisions and ensure plans are safe, effective, and appropriate.

Q7. **Occupation:**
Magnetic Resonance Imaging Technologists

Task:
Troubleshoot technical issues related to magnetic resonance imaging (MRI) scanner or peripheral equipment, such as monitors or coils.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3

- (●) 4
- ( ) 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with troubleshooting by interpreting error messages, summarizing equipment manuals, suggesting common causes of technical problems, creating maintenance checklists, and helping document service issues. This can reduce downtime and improve the efficiency of resolving routine equipment problems.

Risk justification. Optional justification of your risk rating

The risk is high because MRI systems are complex and safety-critical, requiring strict adherence to manufacturer specifications and safety protocols. Incorrect troubleshooting guidance could damage expensive equipment, compromise image quality, delay patient care, or create safety hazards. LLM generated recommendations should only supplement expert judgment, approved technical documentation, and qualified service procedures.

Q7. **Occupation:**
Massage Therapists

Task:
Perform other adjunctive therapies or treatment techniques in addition to massage.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ( ) 0
- ( ) 1
- (●) 2
- ( ) 3
- ( ) 4
- ( ) 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ( ) 0
- ( ) 1
- ( ) 2
- ( ) 3
- ( ) 4
- (●) 5

Reward Justification. Optional justification of your reward rating

LLM systems can provide limited support by offering educational resources, summarizing treatment techniques, assisting with documentation, and helping therapists review general information about adjunctive therapies. However, the actual application of hands on techniques requires physical skill, clinical judgment, and direct client assessment, resulting in limited direct time or cost savings.

Risk justification. Optional justification of your risk rating

The risk is very high because adjunctive therapies may involve techniques that require specialized training, careful assessment, and consideration of client health conditions, injuries, and contraindications. LLMs may provide inaccurate, incomplete, or inappropriate guidance that could result in client harm if applied without professional judgment. Qualified massage therapists must determine appropriate techniques and ensure safe delivery of care.

Q7. **Occupation:**
Medical Assistants

Task:
Interview patients to obtain medical information and measure their vital signs, weight, and height.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLM systems can assist with preparing patient questionnaires, organizing collected information, generating documentation templates, and supporting data entry. However, the task requires direct patient interaction and physical measurement of vital signs, height, and weight, limiting the amount of direct time savings.

Risk justification. Optional justification of your risk rating

The risk is high because accurate patient information and vital sign measurements are essential for clinical decision making. LLMs cannot physically perform measurements, assess patient behavior or condition, or replace the communication skills needed for patient interviews. Errors, missed symptoms, or inaccurate documentation could affect patient care, so all information must be collected and verified by trained medical staff.

Q23. Thank you for participating in this study. Your responses have been successfully recorded.
