Instructions. **Project Title**: Economic Impact of LLM Systems on HealthCare Tasks

Invitation You are invited to participate in a research study conducted by researchers at the University of Illinois Urbana–Champaign. The purpose of this study is to construct an independent reference benchmark for evaluating AI-generated assessments of healthcare occupational tasks. Your participation is voluntary.

Who Can Participate? You should participate only if you have professional experience in the healthcare field (e.g., Therapists, Dietitians, Physicians, Nurses, Dentists, Surgeons or another healthcare profession).

Procedures You will review 60 occupational tasks drawn from healthcare occupations in the O*NET database.

For each task, you will: assign a Reward score between 0 and 5, assign a Risk score between 0 and 5, and optionally provide a brief explanation for your ratings.

For both assessments, assume that a qualified healthcare professional completes the task using assistance from a current frontier large language model (LLM) or LLM-based agent.

Reward measures the potential net productivity benefit (such as time or cost savings), relative to completing the task without LLM assistance, while accounting for the effort required to verify and correct the model's outputs.

Risk measures the likelihood and potential severity of harms that could arise from using the LLM for the task, including harms affecting individuals, organizations, or society.

Time Required Approximately 60-75 minutes.

Compensation You will receive $25 through Prolific upon successful completion of the study and submission of a valid completion code.

Risks The risks associated with participation are no greater than those ordinarily encountered when completing an online questionnaire.

Benefits You will not receive any direct benefit from participating. However, your responses will help researchers develop more reliable methods for evaluating AI systems used in workforce and economic analyses.

Privacy and Confidentiality No personally identifying information will be collected as part of the research dataset. Responses will be stored securely and analyzed only in aggregate. Information collected through Prolific will be used solely to verify study completion and process compensation.

Voluntary Participation Your participation is entirely voluntary. You may stop participating at any time before submitting your responses without penalty.

Contact Information
Gagandeep Singh
Assistant Professor
School of Computing and Data Science
University of Illinois Urbana–Champaign (UIUC)
Email: ggnds@illinois.edu

Consent. I have read the information above and voluntarily agree to participate in this research study.

- (●) Yes
- ( ) No

Eligibility. Do you have professional education, training, or work experience in the healthcare field that would allow you to evaluate healthcare occupational tasks?

- (●) Yes
- ( ) No

Experience. How many years of professional experience do you have in the healthcare field?

- ( ) <1 year
- ( ) 1-2 years
- ( ) 3-5 years
- ( ) 6-10 years
- (●) >10 years

Instructions. For each task within different occupations, determine the risks and rewards of using an LLM system (e.g., LLMs, LLM-based agents) in collaboration with a human expert to complete the task. For determination, use your knowledge of the current capabilities of the best-performing LLM systems.

First, determine whether the task is safety-critical, i.e., any unintentional errors or exploitation of LLM capabilities by malicious actors can cause significant harm at the individual, organizational, or societal level. If yes, then quantify the extent to which using the combination of LLM Systems + Human Experts in performing the task increases the risk compared to only having human experts complete the task. Considering the cost of detecting and mitigating risks with experts, determine if the combination of LLM systems + Human Experts can significantly decrease the cost (in USD) or time of completing the task while keeping the same quality as expert humans.

Key vulnerabilities of LLM systems to consider include:

1. **Discrimination**. Unequal treatment of individuals or groups by LLM systems, often based on race, gender, or other sensitive characteristics, resulting in unfair outcomes and representation of those groups. Further, the accuracy and effectiveness of LLM decisions and actions are dependent on group membership, where decisions in LLM system design and biased training data lead to unequal outcomes, reduced benefits, increased effort, and alienation of users.

2. **Toxicity.** LLMs can expose users to harmful, abusive, unsafe, or inappropriate content. May involve providing advice or encouraging action. Examples of toxic content include hate speech, violence, extremism, illegal acts, or child sexual abuse material, as well as content that violates community norms such as profanity, inflammatory, political speech, or pornography.

3. **Privacy**. LLM systems memorize and leak sensitive personal data or infer private information about individuals without their consent. Unexpected or unauthorized sharing of data and information can compromise user expectations of privacy, assist identity theft, or cause loss of confidential intellectual property.

4. **Security**. Vulnerabilities can be exploited in LLM systems, software development toolchains, and hardware, resulting in unauthorized access, data and privacy breaches, or system manipulation causing unsafe outputs or behavior.

5. **Misinformation**. LLM systems can inadvertently generate or spread incorrect or deceptive information, which can lead to inaccurate beliefs in users and undermine their autonomy. Humans who make decisions based on false beliefs can experience physical, emotional, or material harm. Highly personalized LLM-generated misinformation creates “filter bubbles” where individuals only see what matches their existing beliefs, undermining shared reality and weakening social cohesion and political processes.

6. **Malicious Actors and Misuse**. LLM systems can be used to conduct large-scale disinformation campaigns, malicious surveillance, or targeted and sophisticated automated censorship and propaganda, to manipulate political processes, public opinion, and behavior. LLM systems can be used to develop cyber weapons (e.g., by coding cheaper, more effective malware), develop new or enhance existing weapons (e.g., Lethal Autonomous Weapons or chemical, biological, radiological, nuclear, and high-yield explosives), or use weapons to cause mass harm. LLM systems can be used to gain a personal advantage over others through cheating, fraud, scams, blackmail, or targeted manipulation of beliefs or behavior. Examples include LLM-facilitated plagiarism for research or education, impersonating a trusted or fake individual for illegitimate financial benefit, or creating humiliating or sexual imagery.

For each evaluation: Rate both the reward and risk associated with LLM systems on a scale from 0 to 5. Here, for rewards, a rating of 0 means that using LLM systems cannot reduce overall task completion time or cost while keeping equivalent quality, rating <=2 means relatively low reduction in overall cost or time or both, rating of 3 means moderate reduction, and >=4 means high reduction. A rating of 0 for risks means that the task is not safety-critical, a risk rating <=2 means it can be easily detected and/or fixed by human experts, a rating of 3 means that the risk is moderate, and rating >=4 means the risk is high and cannot be easily detected. You can also provide an optional justification for your rating.

Example Evaluation

1. **Occupation**: Mathematicians
Task: Conduct research to extend mathematical knowledge in traditional areas, such as algebra, geometry, probability, and logic.

Reward Rating: 2
Risk Rating: 0
Reward Justification: LLMs can speed up subtasks like proof sketching, counterexample search, and literature review with the expert validating all claims. However, existing systems struggle in coming up with the right ideas and sketches for frontier math problems.
Risk Justification: The task is not safety critical, and therefore, there is no risk.

2. **Occupation**: Pharmacists
Task: Provide information and advice regarding drug interactions, side effects, dosage, and proper medication storage.

Reward Rating: 3
Risk Rating: 5
Reward Justification: Best rewards are on communication and workflow (not core clinical judgment): draft patient-friendly counseling, generate clarifying questions and draft messages to prescribers, while the pharmacist verifies key facts in trusted databases.
Risk Justification: The task is safety critical as incorrect interaction, dose, side-effect, or storage advice can cause serious harm. LLMs raise risks mainly via confident clinical errors or omissions, and automation bias. Most errors are catchable if a pharmacist verifies using authoritative drug databases or labeling and uses the patient profile, but subtle mistakes and outdated guidance can slip through, causing substantial harm.

3. **Occupation**: Human Resources Managers
Task: Identify staff vacancies and recruit, interview, and select applicants.

Reward Rating: 4
Risk Rating: 3
Reward Justification: high reward when used for operations, not decision-making: draft job ads or outreach, summarize resumes into structured fields (verified), generate interview guides or rubrics, schedule or communicate, and draft documentation.
Risk Justification: It's a critical task, and hiring errors can cause serious individual harm and create legal or reputational risk. LLMs raise risk via biased screening or interview framing, mishandling applicant PII,

incorrect compliance guidance, and misuse. Many issues are catchable with structured rubrics, audits, and keeping LLM output advisory, not decisive, but subtle bias or privacy failures can slip through.

4. **Occupation**: Claims Adjusters, Examiners, and Investigators
Task: Review police reports, medical treatment records, medical bills, or physical property damage to determine the extent of liability.

Reward Rating: 4
Risk Rating: 4
Reward Justification: High reward for evidence organization: extract entities, build timelines, flag inconsistencies, draft letters, and generate follow-up questions.
Risk Justification: The task is safety critical; wrong liability calls can seriously harm claimants or insurers and create legal or fraud exposure. LLMs raise risk by misreading or omitting evidence, hallucinating facts, making overconfident liability inferences, and introducing biased credibility judgments; sensitive medical or police data also heightens privacy or security risk, and fraudsters can tailor narratives to game the model. Humans can catch many issues if LLMs are limited to summarization or extraction and every claim is traced back to the record, but subtle distortions can slip through.

Comprehension check. Before continuing, please answer the following question to confirm your understanding of the task.

When assigning the Reward score, what should you compare?

- (●) The benefit of completing the task with assistance from an LLM compared with completing the same task without an LLM after accounting for verification costs
- ( ) The performance of one LLM compared with another LLM.
- ( ) The benefit of completing the task with assistance from an LLM compared with completing the same task without an LLM without considering verification costs
- ( ) The benefit of this task compared with other healthcare tasks.

Comprehension check. **When assigning the Risk score, what should you consider?**

- ( ) how frequently the LLM makes mistakes.
- ( ) the potential consequences of humans generating harmful output
- (●) the potential consequences of harmful errors that go undetected
- ( ) the amount of time saved by using the LLM

Q20. **Your previous response indicates that the rating criteria may not have been fully understood.**

For each task within different occupations, determine the risks and rewards of using an LLM system (e.g., LLMs, LLM-based agents) in collaboration with a human expert to complete the task. For determination, use your knowledge of the current capabilities of the best-performing LLM systems.

First, determine whether the task is safety-critical, i.e., any unintentional errors or exploitation of LLM capabilities by malicious actors can cause significant harm at the individual, organizational, or societal level. If yes, then quantify the extent to which using the combination of LLM Systems + Human Experts in performing the task increases the risk compared to only having human experts complete the task. Considering the cost of detecting and mitigating risks with experts, determine if the combination of LLM systems + Human Experts can significantly decrease the cost (in USD) or time of completing the task while keeping the same quality as expert humans. Key vulnerabilities of LLM systems to consider include: **Discrimination, Toxicity, Privacy, Security, Misinformation, and Malicious Actors and Misuse**.

For each evaluation: Rate both the reward and risk associated with LLM systems on a scale from 0 to 5. Here, for rewards, a rating of 0 means that using LLM systems cannot reduce overall task completion time or cost while keeping equivalent quality, rating <=2 means relatively low reduction in overall cost or time or both, rating of 3 means moderate reduction, and >=4 means high reduction. A rating of 0 for risks means that the task is not safety-critical, a risk rating <= 2 means it can be easily detected and/or fixed by human experts, a rating of 3 means that the risk is moderate, and rating >= 4 means the risk is high and cannot be easily detected. You can also provide an optional justification for your rating.

This question was not displayed to the respondent.

Q21. Let's review the instructions once more. Please answer the following questions to confirm your understanding of the task. **To continue with the survey, you must answer both questions correctly. Otherwise, the survey will end.**

For the Reward score, what should you compare?

This question was not displayed to the respondent.

Q22. **For the Risk score, what should you consider?**

This question was not displayed to the respondent.

Q7. **Occupation:**
Acupuncturists

Task:
Educate patients on topics, such as meditation, ergonomics, stretching, exercise, nutrition, the healing process, breathing, or relaxation techniques.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs can quickly generate educational content and patient handouts on wellness topics. This reduces time spent drafting materials, allowing the acupuncturist to focus on patient care and personalization.

Risk justification. Optional justification of your risk rating

Risk is moderate because inaccurate information about exercise, nutrition, or health could lead to patient harm if not caught. Human expert oversight lowers the risk but does not eliminate it entirely.

Q7. **Occupation:**
Acute Care Nurses

Task:
Provide formal and informal education to other staff members.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs can rapidly draft training content, slides, and educational materials for staff. This saves nurses significant preparation time while allowing them to focus on delivery and clinical accuracy.

Risk justification. Optional justification of your risk rating

Risk is moderately high because errors in educational content could be taught to multiple staff members, potentially impacting patient safety. Human expert review is essential to prevent misinformation from spreading.

Q7. **Occupation:**
Advanced Practice Psychiatric Nurses

Task:
Participate in activities aimed at professional growth and development, including conferences or continuing education activities.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

It can efficiently summarize research, identify relevant conferences and CE credits, and help draft learning plans. This saves time for psychiatric nurses pursuing professional development.

Risk justification. Optional justification of your risk rating

Risk is low because errors mainly affect learning quality, not direct patient outcomes. With expert oversight, the likelihood of serious harm is minimal

Q7. **Occupation:**
Allergists and Immunologists

Task:
Present research findings at national meetings or in peer-reviewed journals.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs can significantly reduce time spent drafting manuscripts, abstracts, and presentation materials. They help organize research findings and improve clarity, allowing allergists and immunologists to focus on analysis and review.

Risk justification. Optional justification of your risk rating

Risk is high because errors in research dissemination can spread misinformation in scientific literature and at conferences. Inaccurate data or fabricated citations could damage professional reputation and affect patient care guidelines if not caught by expert review.

Q7. **Occupation:**
Anesthesiologist Assistants

Task:
Participate in seminars, workshops, or other professional activities to keep abreast of developments in anesthesiology.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

An LLM can really help here by summarizing workshop content, finding relevant seminars, and pulling out key takeaways from new research. It saves a lot of time that would otherwise be spent reading through papers and notes, so the assistant can focus on actually learning and applying it.

Risk justification. Optional justification of your risk rating

The risk feels pretty low because this is about learning, not direct patient care. The worst case is maybe getting some outdated info, but since a human expert will review everything before using it, I don't see much chance of serious harm.

Q7. **Occupation:**
Art Therapists

Task:
Recommend or purchase needed art supplies or equipment.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

This is where an LLM is actually really helpful. It can quickly compare prices, find suppliers, make supply lists, and even draft purchase orders. That saves art therapists a ton of time they'd otherwise spend googling and calling vendors, so they can get back to working with patients.

Risk justification. Optional justification of your risk rating

Risk is very low here. The worst thing that happens is maybe the LLM suggests the wrong brand of paint or forgets something on the list. But the therapist is still reviewing and approving the purchase, so there's basically no chance of harm.

Q7. **Occupation:**
Athletic Trainers

Task:
Develop training programs or routines designed to improve athletic performance.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

An LLM can save a lot of time here. It can help draft workout plans, suggest drills, and organize periodization schedules based on an athlete's goals. The trainer still has to personalize and approve everything, but it cuts down the hours spent planning from scratch.

Risk justification. Optional justification of your risk rating

I'd put the risk at medium. If the LLM suggests an exercise that's not appropriate or misses an injury risk, and the trainer doesn't catch it, that could actually hurt an athlete. So human oversight is really important, but with a qualified trainer reviewing it, the risk is manageable.

Q7. **Occupation:**
Audiologists

Task:
Conduct or direct research on hearing or balance topics and report findings to help in the development of procedures, technology, or treatments.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs are huge for research tasks like this. They can scan through tons of papers, summarize studies, draft literature reviews, and even help write up findings for reports. It saves audiologists so much time that would otherwise be spent digging through journals and organizing data.

Risk justification. Optional justification of your risk rating

The risk is pretty high here because we're talking about research that could lead to new treatments or technology. If the LLM gets a study wrong or makes up a citation and no one catches it, that could mislead the development process and potentially affect patient care down the line. So expert review is absolutely necessary.

Q7. **Occupation:**
Cardiovascular Technologists and Technicians

Task:
Perform general administrative tasks, such as scheduling appointments or ordering supplies or equipment.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

This is exactly the kind of work LLMs are good at. They can handle drafting emails, managing schedules, making supply lists, and ordering equipment. It frees up a lot of time that techs would normally spend on paperwork so they can focus more on patients.

Risk justification. Optional justification of your risk rating

Risk is really low here. Worst case is maybe a scheduling mix-up or ordering the wrong item, but a human is still double-checking everything before it goes through. Nothing in this task would directly harm a patient if there's a mistake.

Q7. **Occupation:**
Clinical Nurse Specialists

Task:
Provide coaching and mentoring to other caregivers to help facilitate their professional growth and development.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

An LLM can be a great support here. It can help draft coaching plans, create training materials, suggest discussion topics, and pull together resources for new caregivers. That saves specialists a ton of prep time so they can focus more on the actual mentoring and face-to-face guidance.

Risk justification. Optional justification of your risk rating

I'd rate the risk as moderate. Coaching and mentoring involves real people and professional development, so if the LLM gives bad advice or outdated info and it isn't caught, it could mislead other caregivers. The human specialist still needs to review everything, but the impact could be pretty wide if a mistake slips through.

Q7. **Occupation:**
Critical Care Nurses

Task:
Plan, provide, or evaluate educational programs for nursing staff, interdisciplinary health care team members, or community members.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

This is where LLMs really shine. They can draft entire curricula, make slide decks, write handouts, and even help evaluate programs by summarizing feedback. It cuts down hours of prep work for critical care nurses so they can spend more time on patient care and teaching.

Risk justification. Optional justification of your risk rating

The risk is fairly high because education here directly affects how staff and teams care for patients. If the LLM gives incorrect clinical info or outdated guidelines and it isn't caught, that misinformation could spread to a lot of people. So a human expert absolutely has to review everything before it's used.

Q7. **Occupation:**
Cytogenetic Technologists

Task:
Develop and implement training programs for trainees, medical students, resident physicians or post-doctoral fellows.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs are super helpful for this. They can quickly draft training modules, create quizzes, summarize research papers, and build lesson plans. That saves technologists a ton of time they'd otherwise spend putting materials together from scratch.

Risk justification. Optional justification of your risk rating

The risk is pretty high because this is medical education. If the LLM gives wrong info about cytogenetics and the expert doesn't catch it, trainees could learn incorrect procedures or concepts that might impact patient care later. So human review is critical here.

Q7. **Occupation:**
Cytotechnologists

Task:
Attend continuing education programs that address laboratory issues.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

An LLM can make this way easier. It can summarize CE materials, find relevant courses, explain complex lab topics in plain language, and help create study notes. That saves cytotechnologists a lot of time trying to sift through dense materials on their own.

Risk justification. Optional justification of your risk rating

I'd put risk at moderate. If the LLM misinterprets a lab guideline or gives outdated info about procedures, and the technologist doesn't double-check with the actual course content, that could lead to misunderstandings. Since it's education, not direct patient care, the immediate risk is lower but still important to have an expert review it.

Q7. **Occupation:**
Dental Assistants

Task:
Schedule appointments, prepare bills and receive payment for dental services, complete insurance forms, and maintain records, manually or using computer.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0

- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

This is a perfect use case for LLMs. They can draft appointment reminders, help fill out insurance forms, organize billing statements, and even summarize patient records. It would save dental assistants hours of admin work every week so they can focus more on patients.

Risk justification. Optional justification of your risk rating

Risk is low here. The main issues would be things like a typo in a bill or scheduling error, but nothing that directly impacts clinical care. As long as a human double-checks the forms and payments before sending, mistakes are easy to catch

Q7. **Occupation:**
Dental Hygienists

Task:
Maintain patient recall system.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs are great for this kind of admin work. They can help generate recall reminders, personalize messages for patients, track who's due for a visit, and draft follow-up texts or emails. It saves a lot of time compared to doing it all manually.

Risk justification. Optional justification of your risk rating

Risk is pretty low. The worst that could happen is a reminder goes to the wrong person or has the wrong date, but a human is still reviewing the recall list before it goes out. It doesn't directly affect clinical treatment, so the impact of an error is minimal.

Q7. **Occupation:**
Dentists, General

Task:
Manage business aspects such as employing or supervising staff or handling paperwork or insurance claims.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

This is where LLMs can really help dentists save time. They can draft job descriptions, write staff emails, organize paperwork, and help fill out insurance claim forms. That takes a lot of the admin burden off so dentists can focus more on patients instead of office management.

Risk justification. Optional justification of your risk rating

I'd say the risk is moderate. Business decisions and insurance claims have real financial and legal consequences. If the LLM gives wrong info about policies or documentation and it isn't reviewed, it could lead to denied claims or HR issues. So a human still needs to check everything before it's finalized.

Q7. **Occupation:**
Dermatologists

Task:
Read current literature, talk with colleagues, and participate in professional organizations or conferences to keep abreast of developments in dermatology.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

This is a perfect use case for LLMs. They can scan and summarize tons of new research papers, pull out key findings, and help draft notes before conferences. It saves dermatologists so much time they'd otherwise spend reading journals, so they can stay current much faster.

Risk justification. Optional justification of your risk rating

Risk is moderate here. If the LLM misinterprets a study or makes up a citation and the doctor doesn't catch it, that could lead to outdated or incorrect knowledge. Since this directly impacts how they treat patients, the dermatologist still needs to verify everything against the original sources.

Q7. **Occupation:**
Diagnostic Medical Sonographers

Task:
Maintain stock and supplies, preparing supplies for special examinations and ordering supplies when necessary.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs are really good at this kind of admin work. They can help track inventory, draft supply orders, make checklists for special exams, and remind staff when stock is low. It saves sonographers time so they can focus more on patient scans instead of paperwork.

Risk justification. Optional justification of your risk rating

Risk is very low. The worst that could happen is ordering the wrong item or missing a supply, but a human is still reviewing the orders before they're placed. It doesn't directly impact patient diagnosis or safety, so mistakes are easy to fix.

Q7. **Occupation:**
Dietetic Technicians

Task:
Provide dietitians with assistance researching food, nutrition, or food service systems.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs are great for creating teaching materials. They can draft course outlines, write manuals, suggest visual aid ideas, and organize content way faster than doing it all from scratch. It saves dietitians a ton of time so they can focus more on the actual teaching instead of prep work.

Risk justification. Optional justification of your risk rating

Risk is low to moderate. Since this is educational material, not direct patient care, the stakes are lower. The main risk would be inaccurate nutrition info or outdated guidelines, but as long as the dietitian reviews and edits everything, mistakes are easy to catch before it goes to students.

Q7. **Occupation:**
Acupuncturists

Task:
Treat medical conditions, using techniques such as acupressure, shiatsu, or tuina.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs can really help nurses here by drafting plain-language explanations, creating handouts, and suggesting ways to explain complex treatments to families. It saves time during prep and helps make sure the info is clear and consistent, so nurses can spend more time with patients.

Risk justification. Optional justification of your risk rating

Risk is high because these conversations are about real medical conditions and treatment decisions. If the LLM gives incorrect info or uses the wrong tone and the nurse doesn't catch it, that could lead to confusion or harm. The nurse has to review everything and use their judgment in the actual conversation.

Q7. **Occupation:**
Advanced Practice Psychiatric Nurses

Task:
Assess patients' mental and physical status, based on the presenting symptoms and complaints.
