Instructions. **Project Title**: Economic Impact of LLM Systems on HealthCare Tasks

Invitation You are invited to participate in a research study conducted by researchers at the University of Illinois Urbana–Champaign. The purpose of this study is to construct an independent reference benchmark for evaluating AI-generated assessments of healthcare occupational tasks. Your participation is voluntary.

Who Can Participate? You should participate only if you have professional experience in the healthcare field (e.g., Therapists, Dietitians, Physicians, Nurses, Dentists, Surgeons or another healthcare profession).

Procedures You will review 60 occupational tasks drawn from healthcare occupations in the O*NET database.

For each task, you will: assign a Reward score between 0 and 5, assign a Risk score between 0 and 5, and optionally provide a brief explanation for your ratings.

For both assessments, assume that a qualified healthcare professional completes the task using assistance from a current frontier large language model (LLM) or LLM-based agent.

Reward measures the potential net productivity benefit (such as time or cost savings), relative to completing the task without LLM assistance, while accounting for the effort required to verify and correct the model's outputs.

Risk measures the likelihood and potential severity of harms that could arise from using the LLM for the task, including harms affecting individuals, organizations, or society.

Time Required Approximately 60-75 minutes.

Compensation You will receive $25 through Prolific upon successful completion of the study and submission of a valid completion code.

Risks The risks associated with participation are no greater than those ordinarily encountered when completing an online questionnaire.

Benefits You will not receive any direct benefit from participating. However, your responses will help researchers develop more reliable methods for evaluating AI systems used in workforce and economic analyses.

Privacy and Confidentiality No personally identifying information will be collected as part of the research dataset. Responses will be stored securely and analyzed only in aggregate. Information collected through Prolific will be used solely to verify study completion and process compensation.

Voluntary Participation Your participation is entirely voluntary. You may stop participating at any time before submitting your responses without penalty.

Contact Information
Gagandeep Singh
Assistant Professor
School of Computing and Data Science
University of Illinois Urbana–Champaign (UIUC)
Email: ggnds@illinois.edu

Consent. I have read the information above and voluntarily agree to participate in this research study.

- (●) Yes
- ( ) No

Eligibility. Do you have professional education, training, or work experience in the healthcare field that would allow you to evaluate healthcare occupational tasks?

- (●) Yes
- ( ) No

Experience. How many years of professional experience do you have in the healthcare field?

- ( ) <1 year
- ( ) 1-2 years
- (●) 3-5 years
- ( ) 6-10 years
- ( ) >10 years

Instructions. For each task within different occupations, determine the risks and rewards of using an LLM system (e.g., LLMs, LLM-based agents) in collaboration with a human expert to complete the task. For determination, use your knowledge of the current capabilities of the best-performing LLM systems.

First, determine whether the task is safety-critical, i.e., any unintentional errors or exploitation of LLM capabilities by malicious actors can cause significant harm at the individual, organizational, or societal level. If yes, then quantify the extent to which using the combination of LLM Systems + Human Experts in performing the task increases the risk compared to only having human experts complete the task. Considering the cost of detecting and mitigating risks with experts, determine if the combination of LLM systems + Human Experts can significantly decrease the cost (in USD) or time of completing the task while keeping the same quality as expert humans.

Key vulnerabilities of LLM systems to consider include:

1. **Discrimination**. Unequal treatment of individuals or groups by LLM systems, often based on race, gender, or other sensitive characteristics, resulting in unfair outcomes and representation of those groups. Further, the accuracy and effectiveness of LLM decisions and actions are dependent on group membership, where decisions in LLM system design and biased training data lead to unequal outcomes, reduced benefits, increased effort, and alienation of users.

2. **Toxicity.** LLMs can expose users to harmful, abusive, unsafe, or inappropriate content. May involve providing advice or encouraging action. Examples of toxic content include hate speech, violence, extremism, illegal acts, or child sexual abuse material, as well as content that violates community norms such as profanity, inflammatory, political speech, or pornography.

3. **Privacy**. LLM systems memorize and leak sensitive personal data or infer private information about individuals without their consent. Unexpected or unauthorized sharing of data and information can compromise user expectations of privacy, assist identity theft, or cause loss of confidential intellectual property.

4. **Security**. Vulnerabilities can be exploited in LLM systems, software development toolchains, and hardware, resulting in unauthorized access, data and privacy breaches, or system manipulation causing unsafe outputs or behavior.

5. **Misinformation**. LLM systems can inadvertently generate or spread incorrect or deceptive information, which can lead to inaccurate beliefs in users and undermine their autonomy. Humans who make decisions based on false beliefs can experience physical, emotional, or material harm. Highly personalized LLM-generated misinformation creates “filter bubbles” where individuals only see what matches their existing beliefs, undermining shared reality and weakening social cohesion and political processes.

6. **Malicious Actors and Misuse**. LLM systems can be used to conduct large-scale disinformation campaigns, malicious surveillance, or targeted and sophisticated automated censorship and propaganda, to manipulate political processes, public opinion, and behavior. LLM systems can be used to develop cyber weapons (e.g., by coding cheaper, more effective malware), develop new or enhance existing weapons (e.g., Lethal Autonomous Weapons or chemical, biological, radiological, nuclear, and high-yield explosives), or use weapons to cause mass harm. LLM systems can be used to gain a personal advantage over others through cheating, fraud, scams, blackmail, or targeted manipulation of beliefs or behavior. Examples include LLM-facilitated plagiarism for research or education, impersonating a trusted or fake individual for illegitimate financial benefit, or creating humiliating or sexual imagery.

For each evaluation: Rate both the reward and risk associated with LLM systems on a scale from 0 to 5. Here, for rewards, a rating of 0 means that using LLM systems cannot reduce overall task completion time or cost while keeping equivalent quality, rating <=2 means relatively low reduction in overall cost or time or both, rating of 3 means moderate reduction, and >=4 means high reduction. A rating of 0 for risks means that the task is not safety-critical, a risk rating <=2 means it can be easily detected and/or fixed by human experts, a rating of 3 means that the risk is moderate, and rating >=4 means the risk is high and cannot be easily detected. You can also provide an optional justification for your rating.

Example Evaluation

1. **Occupation**: Mathematicians
Task: Conduct research to extend mathematical knowledge in traditional areas, such as algebra, geometry, probability, and logic.

Reward Rating: 2
Risk Rating: 0
Reward Justification: LLMs can speed up subtasks like proof sketching, counterexample search, and literature review with the expert validating all claims. However, existing systems struggle in coming up with the right ideas and sketches for frontier math problems.
Risk Justification: The task is not safety critical, and therefore, there is no risk.

2. **Occupation**: Pharmacists
Task: Provide information and advice regarding drug interactions, side effects, dosage, and proper medication storage.

Reward Rating: 3
Risk Rating: 5
Reward Justification: Best rewards are on communication and workflow (not core clinical judgment): draft patient-friendly counseling, generate clarifying questions and draft messages to prescribers, while the pharmacist verifies key facts in trusted databases.
Risk Justification: The task is safety critical as incorrect interaction, dose, side-effect, or storage advice can cause serious harm. LLMs raise risks mainly via confident clinical errors or omissions, and automation bias. Most errors are catchable if a pharmacist verifies using authoritative drug databases or labeling and uses the patient profile, but subtle mistakes and outdated guidance can slip through, causing substantial harm.

3. **Occupation**: Human Resources Managers
Task: Identify staff vacancies and recruit, interview, and select applicants.

Reward Rating: 4
Risk Rating: 3
Reward Justification: high reward when used for operations, not decision-making: draft job ads or outreach, summarize resumes into structured fields (verified), generate interview guides or rubrics, schedule or communicate, and draft documentation.
Risk Justification: It's a critical task, and hiring errors can cause serious individual harm and create legal or reputational risk. LLMs raise risk via biased screening or interview framing, mishandling applicant PII,

incorrect compliance guidance, and misuse. Many issues are catchable with structured rubrics, audits, and keeping LLM output advisory, not decisive, but subtle bias or privacy failures can slip through.

4. **Occupation**: Claims Adjusters, Examiners, and Investigators
Task: Review police reports, medical treatment records, medical bills, or physical property damage to determine the extent of liability.

Reward Rating: 4
Risk Rating: 4
Reward Justification: High reward for evidence organization: extract entities, build timelines, flag inconsistencies, draft letters, and generate follow-up questions.
Risk Justification: The task is safety critical; wrong liability calls can seriously harm claimants or insurers and create legal or fraud exposure. LLMs raise risk by misreading or omitting evidence, hallucinating facts, making overconfident liability inferences, and introducing biased credibility judgments; sensitive medical or police data also heightens privacy or security risk, and fraudsters can tailor narratives to game the model. Humans can catch many issues if LLMs are limited to summarization or extraction and every claim is traced back to the record, but subtle distortions can slip through.

Comprehension check. Before continuing, please answer the following question to confirm your understanding of the task.

When assigning the Reward score, what should you compare?

- (●) The benefit of completing the task with assistance from an LLM compared with completing the same task without an LLM after accounting for verification costs
- ( ) The performance of one LLM compared with another LLM.
- ( ) The benefit of completing the task with assistance from an LLM compared with completing the same task without an LLM without considering verification costs
- ( ) The benefit of this task compared with other healthcare tasks.

Comprehension check. **When assigning the Risk score, what should you consider?**

- ( ) how frequently the LLM makes mistakes.
- ( ) the potential consequences of humans generating harmful output
- (●) the potential consequences of harmful errors that go undetected
- ( ) the amount of time saved by using the LLM

Q20. **Your previous response indicates that the rating criteria may not have been fully understood.**

For each task within different occupations, determine the risks and rewards of using an LLM system (e.g., LLMs, LLM-based agents) in collaboration with a human expert to complete the task. For determination, use your knowledge of the current capabilities of the best-performing LLM systems.

First, determine whether the task is safety-critical, i.e., any unintentional errors or exploitation of LLM capabilities by malicious actors can cause significant harm at the individual, organizational, or societal level. If yes, then quantify the extent to which using the combination of LLM Systems + Human Experts in performing the task increases the risk compared to only having human experts complete the task. Considering the cost of detecting and mitigating risks with experts, determine if the combination of LLM systems + Human Experts can significantly decrease the cost (in USD) or time of completing the task while keeping the same quality as expert humans. Key vulnerabilities of LLM systems to consider include: **Discrimination, Toxicity, Privacy, Security, Misinformation, and Malicious Actors and Misuse**.

For each evaluation: Rate both the reward and risk associated with LLM systems on a scale from 0 to 5. Here, for rewards, a rating of 0 means that using LLM systems cannot reduce overall task completion time or cost while keeping equivalent quality, rating <=2 means relatively low reduction in overall cost or time or both, rating of 3 means moderate reduction, and >=4 means high reduction. A rating of 0 for risks means that the task is not safety-critical, a risk rating <= 2 means it can be easily detected and/or fixed by human experts, a rating of 3 means that the risk is moderate, and rating >= 4 means the risk is high and cannot be easily detected. You can also provide an optional justification for your rating.

This question was not displayed to the respondent.

Q21. Let's review the instructions once more. Please answer the following questions to confirm your understanding of the task. **To continue with the survey, you must answer both questions correctly. Otherwise, the survey will end.**

For the Reward score, what should you compare?

This question was not displayed to the respondent.

Q22. **For the Risk score, what should you consider?**

This question was not displayed to the respondent.

Q7. **Occupation:**
Acupuncturists

Task:
Educate patients on topics, such as meditation, ergonomics, stretching, exercise, nutrition, the healing process, breathing, or relaxation techniques.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs significantly speed up drafting patient-friendly educational handouts, tailored wellness routines, and relaxation guides, allowing the acupuncturist to focus on direct patient care while quickly reviewing the generated material.

Risk justification. Optional justification of your risk rating

The educational content covers non-invasive general wellness topics (ergonomics, breathing, stretching), presenting low risk of severe harm even if minor errors occur prior to professional review.

Q7. **Occupation:**
Acute Care Nurses

Task:
Provide formal and informal education to other staff members.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs can quickly generate curriculum outlines, training slides, and quick-reference guides for staff training, significantly cutting administrative prep time while requiring the nurse to verify clinical accuracy.

Risk justification. Optional justification of your risk rating

In an acute care setting, inaccurate educational content or flawed procedural guidance taught to staff could lead to erroneous clinical decisions and potential patient safety risks if unchecked

Q7. **Occupation:**
Advanced Practice Psychiatric Nurses

Task:
Participate in activities aimed at professional growth and development, including conferences or continuing education activities.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ◉ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Risk justification. Optional justification of your risk rating

Q7. **Occupation:**
Allergists and Immunologists

Task:
Present research findings at national meetings or in peer-reviewed journals.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs speed up subtasks such as drafting manuscript sections, organizing slide decks, and formatting citations, though the core scientific analysis and presentation require direct expert execution

Risk justification. Optional justification of your risk rating

The task involves academic research presentation and publication rather than direct clinical care, making it non-safety critical.

Q7. **Occupation:**
Anesthesiologist Assistants

Task:
Participate in seminars, workshops, or other professional activities to keep abreast of developments in anesthesiology.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs can assist with subtasks like summarizing literature, organizing workshop notes, or finding relevant seminars, but the primary task requires direct human participation and learning

Risk justification. Optional justification of your risk rating

Q7. **Occupation:**
Art Therapists

Task:
Recommend or purchase needed art supplies or equipment.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ◉ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Risk justification. Optional justification of your risk rating

Q7. **Occupation:**
Athletic Trainers

Task:
Develop training programs or routines designed to improve athletic performance.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs speed up drafting workout structures, periodization schedules, and specific training sets, allowing the trainer to efficiently customize and verify the program for individual athletes

Risk justification. Optional justification of your risk rating

Improperly structured workouts present a minor risk of physical strain or injury, but human supervision and adjustments during training minimize potential harm.

Q7. **Occupation:**
Audiologists

Task:
Conduct or direct research on hearing or balance topics and report findings to help in the development of procedures, technology, or treatments.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Risk justification. Optional justification of your risk rating

Q7. **Occupation:**
Cardiovascular Technologists and Technicians

Task:
Perform general administrative tasks, such as scheduling appointments or ordering supplies or equipment.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Risk justification. Optional justification of your risk rating

Q7. **Occupation:**
Clinical Nurse Specialists

Task:
Provide coaching and mentoring to other caregivers to help facilitate their professional growth and development.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ◉ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs can assist with background tasks like drafting professional development templates, career goal outlines, and discussion prompts, but the core coaching and interpersonal guidance require direct human interaction.

Risk justification. Optional justification of your risk rating

The task focuses on caregiver professional development and mentoring rather than direct patient diagnostics or clinical interventions, presenting no safety-critical risk.

Q7. **Occupation:**
Critical Care Nurses

Task:
Plan, provide, or evaluate educational programs for nursing staff, interdisciplinary health care team members, or community members.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs save time on subtasks such as generating lesson plans, drafting presentation slides, and creating evaluation forms, though the critical care nurse must review all clinical content for accuracy

Risk justification. Optional justification of your risk rating

Q7. **Occupation:**
Cytogenetic Technologists

Task:
Develop and implement training programs for trainees, medical students, resident physicians or post-doctoral fellows.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Risk justification. Optional justification of your risk rating

Q7. **Occupation:**
Cytotechnologists

Task:
Attend continuing education programs that address laboratory issues.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs can assist with administrative subtasks like searching for relevant continuing education courses or summarizing course materials, but the main task requires the direct presence and participation of the professional

Risk justification. Optional justification of your risk rating

Q7. **Occupation:**
Dental Assistants

Task:
Schedule appointments, prepare bills and receive payment for dental services, complete insurance forms, and maintain records, manually or using computer.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0

- ○ 1
- ○ 2
- ◉ 3

- ◉ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs streamline inventory tracking, generate examination prep checklists, and automate order drafting, saving significant administrative time with very low verification effort.

Risk justification. Optional justification of your risk rating

Maintaining stock and ordering supplies is a back-office logistical task that presents no safety-critical risk to patient care or clinical safety.

Q7. **Occupation:**
Dietetic Technicians

Task:
Provide dietitians with assistance researching food, nutrition, or food service systems.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs streamline the administrative aspect of documenting recovery notes and formatting patient logs, though active clinical monitoring requires real-time human supervision.

Risk justification. Optional justification of your risk rating

Monitoring patients during post-anesthesia recovery involves safety-critical medical oversight; missed physiological changes or inaccuracies in reporting can result in life-threatening clinical complications.

Q7. **Occupation:**
Anesthesiologists

Task:
Order laboratory tests, x-rays, and other diagnostic procedures.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

Real-time observation of ultrasound screens and auditory signals requires continuous, direct human perception, resulting in minimal time savings from an LLM

Risk justification. Optional justification of your risk rating

Accurately recording live vascular parameters is critical to cardiovascular assessment; errors in monitoring or recording hemodynamic metrics present immediate safety risks to the patient.

Q7. **Occupation:**
Cardiovascular Technologists and Technicians

Task:
Conduct electrocardiogram (EKG), phonocardiogram, echocardiogram, stress testing, or other cardiovascular tests to record patients' cardiac activity, using specialized electronic test equipment, recording devices, or laboratory instruments.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

LLMs can quickly organize and summarize patient histories or structure diagnostic notes, but physical examination and diagnostic reasoning rely primarily on direct human execution.

Risk justification. Optional justification of your risk rating

Primary clinical diagnosis directly guides spinal adjustments and physical therapies; inaccuracies in evaluating histories or x-rays pose significant safety risks to patient well-being.

Q7. **Occupation:**
Clinical Nurse Specialists

Task:
Develop or assist others in development of care and treatment plans.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4

- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs significantly speed up drafting structured care plans and synthesizing protocol documentation, though a specialist must verify all clinical recommendations for accuracy

Risk justification. Optional justification of your risk rating

Developing care and treatment plans directly impacts patient interventions; mistakes or inappropriate care instructions carry a high safety-critical risk to patient health.

Q7. **Occupation:**
Critical Care Nurses

Task:
Collaborate with other health care professionals to develop and revise treatment plans, based on identified needs and assessment data.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ( ) 0
- ( ) 1
- ( ) 2
- ( ) 3
- ( ) 4
- (●) 5

Reward Justification. Optional justification of your reward rating

Preparing patients, sterilizing equipment, and providing chairside assistance are physical, manual tasks that require hands-on execution, resulting in minimal time savings from an LLM.

Risk justification. Optional justification of your risk rating

Instrument sterilization and chairside clinical support directly affect patient safety and infection control; errors or faulty advice in these processes present significant safety risks.

Q7. **Occupation:**
Dental Hygienists

Task:
Feel and visually examine gums for sores and signs of disease.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in

collaboration with a human expert

- (●) 0
- ( ) 1

- ( ) 0
- ( ) 1
- ( ) 2
- ( ) 3
- (●) 4
- ( ) 5

Reward Justification. Optional justification of your reward rating

Feeling and visually examining gums requires physical tactile assessment and direct intraoral observation, providing virtually no opportunity for time savings via an LLM

Risk justification. Optional justification of your risk rating

Oral clinical examinations are essential for identifying diseases and lesions; missing or misinterpreting signs of pathology poses a high safety-critical risk to patient health

Q7. **Occupation:**
Dentists, General

Task:
Perform oral or periodontal surgery on the jaw or mouth.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

LLMs are highly effective at converting unformatted intake notes and clinical observations into structured medical records, generating high efficiency and time savings.

Risk justification. Optional justification of your risk rating

The task involves administrative documentation of clinician-provided findings rather than primary patient diagnosis or direct intervention, presenting low safety-critical risk when reviewed by the expert

Q7. **Occupation:**
Allergists and Immunologists

Task:
Coordinate the care of patients with other health care professionals or support staff.
