Instructions. **Project Title**: Economic Impact of LLM Systems on Legal Tasks

Invitation You are invited to participate in a research study conducted by researchers at the University of Illinois Urbana–Champaign. The purpose of this study is to construct an independent reference benchmark for evaluating AI-generated assessments of occupational tasks. Your participation is voluntary.

Who Can Participate? You should participate only if you have professional experience in the legal field (e.g., attorney, judge, law clerk, paralegal, legal assistant, mediator, arbitrator, or another legal profession).

Procedures You will review 60 occupational tasks drawn from legal occupations in the O*NET database.

For each task, you will: assign a Reward score between 0 and 5, assign a Risk score between 0 and 5, and optionally provide a brief explanation for your ratings.

For both assessments, assume that a qualified legal professional completes the task using assistance from a current frontier large language model (LLM) or LLM-based agent.

Reward measures the potential net productivity benefit (such as time or cost savings), relative to completing the task without LLM assistance, while accounting for the effort required to verify and correct the model's outputs.

Risk measures the likelihood and potential severity of harms that could arise from using the LLM for the task, including harms affecting individuals, organizations, or society.

Time Required Approximately 75-90 minutes.

Compensation You will receive $25 through Amazon Mechanical Turk upon successful completion of the study and submission of a valid completion code.

Risks The risks associated with participation are no greater than those ordinarily encountered when completing an online questionnaire.

Benefits You will not receive any direct benefit from participating. However, your responses will help researchers develop more reliable methods for evaluating AI systems used in workforce and economic analyses.

Privacy and Confidentiality No personally identifying information will be collected as part of the research dataset. Responses will be stored securely and analyzed only in aggregate. Information collected through Amazon Mechanical Turk will be used solely to verify study completion and process compensation.

Voluntary Participation Your participation is entirely voluntary. You may stop participating at any time before submitting your responses without penalty.

Contact Information
Gagandeep Singh
Assistant Professor
School of Computing and Data Science
University of Illinois Urbana–Champaign (UIUC)
Email: ggnds@illinois.edu

Consent. I have read the information above and voluntarily agree to participate in this research study.

- (●) Yes
- ( ) No

Eligibility. Do you have professional education, training, or work experience in the legal field that would allow you to evaluate legal occupational tasks?

- (●) Yes
- ( ) No

Experience. How many years of professional experience do you have in the legal field?

- ( ) <1 year
- ( ) 1-2 years
- (●) 3-5 years
- ( ) 6-10 years
- ( ) >10 years

Instructions. For each task within different occupations, determine the risks and rewards of using an LLM system (e.g., LLMs, LLM-based agents) in collaboration with a human expert to complete the task. For determination, use your knowledge of the current capabilities of the best-performing LLM systems.

First, determine whether the task is safety-critical, i.e., any unintentional errors or exploitation of LLM capabilities by malicious actors can cause significant harm at the individual, organizational, or societal level. If yes, then quantify the extent to which using the combination of LLM Systems + Human Experts in performing the task increases the risk compared to only having human experts complete the task. Considering the cost of detecting and mitigating risks with experts, determine if the combination of LLM systems + Human Experts can significantly decrease the cost (in USD) or time of completing the task while keeping the same quality as expert humans.

Key vulnerabilities of LLM systems to consider include:

1. **Discrimination**. Unequal treatment of individuals or groups by LLM systems, often based on race, gender, or other sensitive characteristics, resulting in unfair outcomes and representation of those groups. Further, the accuracy and effectiveness of LLM decisions and actions are dependent on group membership, where decisions in LLM system design and biased training data lead to unequal outcomes, reduced benefits, increased effort, and alienation of users.

2. **Toxicity.** LLMs can expose users to harmful, abusive, unsafe, or inappropriate content. May involve providing advice or encouraging action. Examples of toxic content include hate speech, violence, extremism, illegal acts, or child sexual abuse material, as well as content that violates community norms such as profanity, inflammatory, political speech, or pornography.

3. **Privacy**. LLM systems memorize and leak sensitive personal data or infer private information about individuals without their consent. Unexpected or unauthorized sharing of data and information can compromise user expectations of privacy, assist identity theft, or cause loss of confidential intellectual property.

4. **Security**. Vulnerabilities can be exploited in LLM systems, software development toolchains, and hardware, resulting in unauthorized access, data and privacy breaches, or system manipulation causing unsafe outputs or behavior.

5. **Misinformation**. LLM systems can inadvertently generate or spread incorrect or deceptive information, which can lead to inaccurate beliefs in users and undermine their autonomy. Humans who make decisions based on false beliefs can experience physical, emotional, or material harm. Highly personalized LLM-generated misinformation creates “filter bubbles” where individuals only see what matches their existing beliefs, undermining shared reality and weakening social cohesion and political processes.

6. **Malicious Actors and Misuse**. LLM systems can be used to conduct large-scale disinformation campaigns, malicious surveillance, or targeted and sophisticated automated censorship and propaganda, to manipulate political processes, public opinion, and behavior. LLM systems can be used to develop cyber weapons (e.g., by coding cheaper, more effective malware), develop new or enhance existing weapons (e.g., Lethal Autonomous Weapons or chemical, biological, radiological, nuclear, and high-yield explosives), or use weapons to cause mass harm. LLM systems can be used to gain a personal advantage over others through cheating, fraud, scams, blackmail, or targeted manipulation of beliefs or behavior. Examples include LLM-facilitated plagiarism for research or education, impersonating a trusted or fake individual for illegitimate financial benefit, or creating humiliating or sexual imagery.

For each evaluation: Rate both the reward and risk associated with LLM systems on a scale from 0 to 5. Here, for rewards, a rating of 0 means that using LLM systems cannot reduce overall task completion time or cost while keeping equivalent quality, rating <=2 means relatively low reduction in overall cost or time or both, rating of 3 means moderate reduction, and >=4 means high reduction. A rating of 0 for risks means that the task is not safety-critical, a risk rating <=2 means it can be easily detected and/or fixed by human experts, a rating of 3 means that the risk is moderate, and rating >=4 means the risk is high and cannot be easily detected. You can also provide an optional justification for your rating.

Example Evaluation

1. **Occupation**: Mathematicians
Task: Conduct research to extend mathematical knowledge in traditional areas, such as algebra, geometry, probability, and logic.

Reward Rating: 2
Risk Rating: 0
Reward Justification: LLMs can speed up subtasks like proof sketching, counterexample search, and literature review with the expert validating all claims. However, existing systems struggle in coming up with the right ideas and sketches for frontier math problems.
Risk Justification: The task is not safety critical, and therefore, there is no risk.

2. **Occupation**: Pharmacists
Task: Provide information and advice regarding drug interactions, side effects, dosage, and proper medication storage.

Reward Rating: 3
Risk Rating: 5
Reward Justification: Best rewards are on communication and workflow (not core clinical judgment): draft patient-friendly counseling, generate clarifying questions and draft messages to prescribers, while the pharmacist verifies key facts in trusted databases.
Risk Justification: The task is safety critical as incorrect interaction, dose, side-effect, or storage advice can cause serious harm. LLMs raise risks mainly via confident clinical errors or omissions, and automation bias. Most errors are catchable if a pharmacist verifies using authoritative drug databases or labeling and uses the patient profile, but subtle mistakes and outdated guidance can slip through, causing substantial harm.

3. **Occupation**: Human Resources Managers
Task: Identify staff vacancies and recruit, interview, and select applicants.

Reward Rating: 4
Risk Rating: 3
Reward Justification: high reward when used for operations, not decision-making: draft job ads or outreach, summarize resumes into structured fields (verified), generate interview guides or rubrics, schedule or communicate, and draft documentation.
Risk Justification: It's a critical task, and hiring errors can cause serious individual harm and create legal or reputational risk. LLMs raise risk via biased screening or interview framing, mishandling applicant PII,

incorrect compliance guidance, and misuse. Many issues are catchable with structured rubrics, audits, and keeping LLM output advisory, not decisive, but subtle bias or privacy failures can slip through.

4. **Occupation**: Claims Adjusters, Examiners, and Investigators
Task: Review police reports, medical treatment records, medical bills, or physical property damage to determine the extent of liability.

Reward Rating: 4
Risk Rating: 4
Reward Justification: High reward for evidence organization: extract entities, build timelines, flag inconsistencies, draft letters, and generate follow-up questions.
Risk Justification: The task is safety critical; wrong liability calls can seriously harm claimants or insurers and create legal or fraud exposure. LLMs raise risk by misreading or omitting evidence, hallucinating facts, making overconfident liability inferences, and introducing biased credibility judgments; sensitive medical or police data also heightens privacy or security risk, and fraudsters can tailor narratives to game the model. Humans can catch many issues if LLMs are limited to summarization or extraction and every claim is traced back to the record, but subtle distortions can slip through.

Comprehension check. Before continuing, please answer the following question to confirm your understanding of the task.

When assigning the Reward score, what should you compare?

- (●) The benefit of completing the task with assistance from an LLM compared with completing the same task without an LLM after accounting for verification costs
- ( ) The performance of one LLM compared with another LLM.
- ( ) The benefit of completing the task with assistance from an LLM compared with completing the same task without an LLM without considering verification costs
- ( ) The benefit of this task compared with other legal tasks.

Comprehension check. **When assigning the Risk score, what should you consider?**

- ( ) how frequently the LLM makes mistakes.
- ( ) the potential consequences of humans generating harmful output
- (●) the potential consequences of harmful errors that go undetected
- ( ) the amount of time saved by using the LLM

Q20. **Your previous response indicates that the rating criteria may not have been fully understood.**

For each task within different occupations, determine the risks and rewards of using an LLM system (e.g., LLMs, LLM-based agents) in collaboration with a human expert to complete the task. For determination, use your knowledge of the current capabilities of the best-performing LLM systems.

First, determine whether the task is safety-critical, i.e., any unintentional errors or exploitation of LLM capabilities by malicious actors can cause significant harm at the individual, organizational, or societal level. If yes, then quantify the extent to which using the combination of LLM Systems + Human Experts in performing the task increases the risk compared to only having human experts complete the task. Considering the cost of detecting and mitigating risks with experts, determine if the combination of LLM systems + Human Experts can significantly decrease the cost (in USD) or time of completing the task while keeping the same quality as expert humans. Key vulnerabilities of LLM systems to consider include: **Discrimination, Toxicity, Privacy, Security, Misinformation, and Malicious Actors and Misuse**.

For each evaluation: Rate both the reward and risk associated with LLM systems on a scale from 0 to 5. Here, for rewards, a rating of 0 means that using LLM systems cannot reduce overall task completion time or cost while keeping equivalent quality, rating <=2 means relatively low reduction in overall cost or time or both, rating of 3 means moderate reduction, and >=4 means high reduction. A rating of 0 for risks means that the task is not safety-critical, a risk rating <= 2 means it can be easily detected and/or fixed by human experts, a rating of 3 means that the risk is moderate, and rating >= 4 means the risk is high and cannot be easily detected. You can also provide an optional justification for your rating.

This question was not displayed to the respondent.

Q21. Let's review the instructions once more. Please answer the following questions to confirm your understanding of the task. **To continue with the survey, you must answer both questions correctly. Otherwise, the survey will end.**

For the Reward score, what should you compare?

This question was not displayed to the respondent.

Q22. **For the Risk score, what should you consider?**

This question was not displayed to the respondent.

Q7. **Occupation:**
Administrative Law Judges, Adjudicators, and Hearing Officers

Task:
Determine existence and amount of liability according to current laws, administrative and judicial precedents, and available evidence.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is low to moderate because verification costs consume most of the time saved.

Risk justification. Optional justification of your risk rating

The risk rating is critical because the real-world consequences of an undetected LLM error are catastrophic.

Q7. **Occupation:**
Administrative Law Judges, Adjudicators, and Hearing Officers

Task:
Conduct hearings to review and decide claims regarding issues, such as social program eligibility, environmental protection, or enforcement of health and safety regulations.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is minimal because the core task takes place in a live, interactive environment where an LLM cannot participate.

Risk justification. Optional justification of your risk rating

The risk remains critical because the decisions made in these hearings govern fundamental human rights, public health, and environmental safety.

Q7. **Occupation:**
Administrative Law Judges, Adjudicators, and Hearing Officers

Task:
Recommend the acceptance or rejection of claims or compromise settlements according to laws, regulations, policies, and precedent decisions.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is low to moderate because the time saved in document drafting is heavily offset by strict legal verification demands

Risk justification. Optional justification of your risk rating

The risk remains critical because recommendations carry severe legal weight and directly impact financial and statutory liabilities.

Q7. **Occupation:**
Administrative Law Judges, Adjudicators, and Hearing Officers

Task:
Authorize payment of valid claims and determine method of payment.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is moderate because the core workflow shifts from creative reasoning to highly structured, rules-based operational data matching.

Risk justification. Optional justification of your risk rating

The risk remains critical because the task involves direct control over financial disbursements, where undetected errors result in immediate, irreversible financial losses.

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Rule on exceptions, motions, or admissibility of evidence.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is low to moderate because the time saved in document organization is heavily countered by intense verification requirements

Risk justification. Optional justification of your risk rating

The risk remains critical because an undetected error at the evidentiary stage fatally compromises the legal validity of the entire proceeding.

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Recommend acceptance or rejection of compromise settlement offers.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- (●) 2
- ( ) 3
- ( ) 4
- ( ) 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ( ) 0
- ( ) 1
- ( ) 2
- ( ) 3
- ( ) 4
- (●) 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is low to moderate because the time saved in document processing is heavily offset by the cognitive costs of strict legal verification

Risk justification. Optional justification of your risk rating

The risk remains critical because an undetected error in a settlement recommendation can permanently strip a party of their legal rights and cause severe financial harm

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Apply relevant laws, regulations, policies, or precedents to reach conclusions.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ( ) 0
- ( ) 1
- (●) 2
- ( ) 3
- ( ) 4
- ( ) 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is low to moderate because the time saved during the research phase is consumed by the strict demands of legal verification

Risk justification. Optional justification of your risk rating

The risk remains critical because an undetected error in a legal conclusion directly invalidates the legitimacy of the entire ruling.

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Conduct hearings to obtain information or evidence relative to disposition of claims.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2

- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is minimal because the core workflow takes place in a live, human-centric environment that cannot be automated.

Risk justification. Optional justification of your risk rating

The risk remains critical because the evidence gathered during hearings forms the foundational record upon which all final, legally binding decisions rest.

Q7. **Occupation:**
Judges, Magistrate Judges, and Magistrates

Task:
Monitor proceedings to ensure that all applicable rules and procedures are followed.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is minimal because the core workflow requires split-second, real-time decision-making in a physical or live digital environment

Risk justification. Optional justification of your risk rating

The risk remains critical because procedural integrity is the bedrock of constitutional due process, and undetected errors can fatally compromise an entire legal case

Q7. **Occupation:**
Judges, Magistrate Judges, and Magistrates

Task:
Participate in judicial tribunals to help resolve disputes.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is low to moderate because the time saved in document synthesis is heavily countered by the high cognitive cost of collaborative verification.

Risk justification. Optional justification of your risk rating

The risk remains critical because appellate or tribunal decisions establish binding jurisprudence, and undetected errors can warp the rule of law.

Q7. **Occupation:**
Judges, Magistrate Judges, and Magistrates

Task:
Instruct juries on applicable laws, direct juries to deduce the facts from the evidence presented, and hear their verdicts.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is minimal because the core workflow takes place in a live courtroom environment where an LLM cannot participate

Risk justification. Optional justification of your risk rating

The risk remains critical because jury instructions are a common source of legal error, and a single undetected flaw will instantly dismantle an entire trial.

Q7. **Occupation:**
Judges, Magistrate Judges, and Magistrates

Task:
Award compensation for damages to litigants in civil cases in relation to findings by juries or by the court.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is low to moderate because the efficiency gained in financial data organization is heavily restricted by strict legal verification demands.

Risk justification. Optional justification of your risk rating

The risk remains critical because civil damage awards represent binding financial mandates, and undetected errors cause immediate, severe financial and legal harm

Q7. **Occupation:**
Judges, Magistrate Judges, and Magistrates

Task:
Rule on custody and access disputes, and enforce court orders regarding custody and support of children.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is low to moderate because administrative efficiencies are bottlenecked by the intensive human verification required for family law decisions.

Risk justification. Optional justification of your risk rating

The risk remains critical because undetected errors in child custody and support orders directly jeopardize human safety and constitutional parental rights.

Q7. **Occupation:**
Judicial Law Clerks

Task:
Participate in conferences or discussions between trial attorneys and judges.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1

- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is minimal because the core workflow requires active participation in a live, unscripted human environment

Risk justification. Optional justification of your risk rating

The risk remains critical because chambers conferences set the strategic trajectory of a lawsuit, and undetected errors directly sabotage the administration of justice.

Q7. **Occupation:**
Judicial Law Clerks

Task:
Confer with judges concerning legal questions, construction of documents, or granting of orders.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ◉ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is low to moderate because the efficiency gained during research preparation is capped by the high cognitive cost of legal verification.

Risk justification. Optional justification of your risk rating

The risk remains critical because a clerk's counsel directly shapes enforceable judicial decisions, and undetected errors can cause systemic legal failure.

Q7. **Occupation:**
Lawyers

Task:
Represent clients in court or before government agencies.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2

- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is minimal because the core workflow requires active, real-time verbal advocacy in a live human environment where an LLM cannot participate.

Risk justification. Optional justification of your risk rating

The risk remains critical because the consequences of an undetected error in formal representation are severe, legally binding, and can instantly destroy a client's liberty or property.

Q7. **Occupation:**
Lawyers

Task:
Act as agent, trustee, guardian, or executor for businesses or individuals.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

The net benefit of using an LLM for this task is low to moderate because the administrative time saved on document organization is tightly restricted by the strict demands of fiduciary oversight.

Risk justification. Optional justification of your risk rating

The risk remains critical because fiduciary duties carry the highest standard of care under the law, and undetected errors result in immediate, severe financial and personal harm.

Q7. **Occupation:**
Lawyers

Task:
Present evidence to defend clients or prosecute defendants in criminal or civil litigation.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ◉ 1
- ○ 2
- ○ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

Accelerated Legislative Drafting: LLMs reduce the time needed to draft initial statutory language or regulatory text from days to minutes.Cross-Jurisdictional Mapping: The system instantly cross-references statutory text across multiple states to identify identical language, gaps, or alternative regulatory models.Plain-Language Translation: It efficiently converts complex, technical policy goals into formal statutory definitions and structured enforcement procedures.Scalable Explanatory Material: LLMs quickly generate necessary accompanying documents, such as legislative intent memos and plain-language public summaries.

Risk justification. Optional justification of your risk rating

Systemic Legal Failures: A single misplaced word or structural flaw in a state law can invalidate entire public programs, costing taxpayers millions.Invisible Authority Fabrications: LLMs routinely fabricate legal cross-references, statutory codes, and administrative precedents that appear completely valid to the untrained eye.Democratic Compromise Blindness: AI cannot predict or navigate the highly sensitive political horse-trading and specific linguistic compromises needed to clear legislative committees.Sovereign & Constitutional Liability: Flawed AI-generated enforcement mechanisms risk violating constitutional rights, leading to immediate federal injunctions and civil rights lawsuits.

Q7. **Occupation:**
Paralegals and Legal Assistants

Task:
Meet with clients and other professionals to discuss details of cases.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Automated Meeting Preparation: LLMs quickly synthesize client intake forms, discovery documents, and case histories into concise briefings before the meeting.Real-Time Transcription Summaries: The system can process live audio transcripts to instantly extract action items, deadlines, and core narrative points.Follow-Up Document Generation: It accelerates the creation of post-meeting summaries, client updates, and formal follow-up emails from meeting notes.Multilingual Intake Support: LLMs can provide real-time translation or draft initial client questionnaires in multiple languages to bridge communication gaps.

Risk justification. Optional justification of your risk rating

Data Privacy Violations: Inputting unencrypted, sensitive client case details or proprietary corporate information into commercial LLMs risks massive privilege and confidentiality breaches.Nuance and Empathy Blindness: AI cannot read human body language, emotional distress, or the subtle hesitation a client might show when revealing sensitive facts.Misleading Legal Information: If used as a real-time reference during a meeting, an LLM can provide hallucinated case law or incorrect procedural advice to the paralegal.Unauthorized Practice of Law (UPL): Reliance on real-time LLM suggestions during discussions increases the risk of a paralegal inadvertently providing legal advice instead of gathering facts.

Q7. **Occupation:**
Administrative Law Judges, Adjudicators, and Hearing Officers

Task:
Issue subpoenas and administer oaths in preparation for formal hearings.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3

- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Template Automation: Instantly generates boilerplate subpoena text, cutting manual clerical prep time.Verbatim Standardization: Quickly pulls precise statutory phrasing for oaths across various jurisdictions.Information Extraction: Rapidly pulls witness names and document descriptions from raw case files.Instruction Generation: Swiftly drafts plain-language compliance guides to accompany formal legal notices.

Risk justification. Optional justification of your risk rating

Scope Overreach: May generate overly broad discovery demands susceptible to legal challenges.Hallucinated Citations: Risks fabricating administrative codes or procedural rules governing subpoena power.Confidentiality Leaks: Potential exposure of protected witness identities or sealed case details to AI models.Defective Verbiage: Minor drafting errors in oath text could compromise the validity of subsequent testimony.

Q7. **Occupation:**
Administrative Law Judges, Adjudicators, and Hearing Officers

Task:
Conduct studies of appeals procedures in field agencies to ensure adherence to legal requirements and to facilitate determination of cases.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Efficient Regulatory Auditing: LLMs rapidly ingest multi-volume agency procedural manuals and compare them against active federal or state statutory mandates to flag outdated procedures.Bottleneck Identification: The system processes raw case-tracking logs to categorize delays, identify specific procedural stages causing backlogs, and map case determination timelines.Drafting Reform Recommendations: It accelerates the generation of comprehensive study reports, translating dry structural data into formal, actionable recommendations for agency leadership.Comparative Process Mapping: LLMs swiftly compile and compare appellate workflows from different field offices to highlight highly efficient, standardized internal practices.

Risk justification. Optional justification of your risk rating

Regulatory Hallucinations: When reviewing specialized field agency practices, LLMs can confidently invent non-existent regulatory requirements or cite rescinded administrative rules.Contextual Nuance Deletion: AI frequently misses localized operational constraints or minor agency specificities that directly impact why certain appeals procedures exist in their current form.Systemic Bias Amplification: If historical case data used in the study contains embedded operational or socioeconomic biases, the LLM will likely reflect and validate those flaws in its procedural assessments.Confidentiality Infractions: Uploading internal agency logs, pending appellate deliberations, or unredacted claimant data into a public or non-secure LLM environment can trigger severe privacy breaches.

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Determine extent of liability according to evidence, laws, or administrative or judicial precedents.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

Precedent Synthesis: LLMs dramatically accelerate the research phase by scanning thousands of judicial decisions and administrative rulings to extract relevant liability parameters.Evidence Damage Assessment: The system swiftly parses complex financial data, medical records, or contractual invoices to help calculate exact ranges for economic damages.Comparative Brief Analysis: It instantly isolates contradictions and overlapping arguments between opposing parties' legal briefs, shortening pre-hearing preparation.Drafting Liability Frameworks: LLMs rapidly generate initial structured outlines and neutral language options for the allocation of fault, accelerating final settlement drafts.

Risk justification. Optional justification of your risk rating

Conflicting Precedent Hallucinations: In highly specialized alternative dispute resolution (ADR) cases, LLMs can fabricate convincing but non-existent judicial holdings regarding liability limits.Breach of Binding Confidentiality: Uploading non-public arbitration briefs, proprietary corporate evidence, or sensitive mediation statements into standard LLM engines violates severe non-disclosure rules.Hidden Algorithmic Bias: LLMs may inadvertently favor standard corporate arguments or miscalculate proportional fault based on historic biases embedded in their training data.Erosion of Neutral Authority: Over-reliance on AI-generated liability determinations undermines the neutral human judgment, empathy, and professional integrity vital to a binding ADR process.

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Prepare written opinions or decisions regarding cases.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2

- ○ 3

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

Accelerated Decision Drafting: LLMs reduce the time spent writing comprehensive arbitration awards from several days to hours by instantly formatting structural layouts, boilerplate legal definitions, and case procedural histories.Argument Integration: The system seamlessly merges summarized arguments from opposing parties' briefs directly into the relevant sections of the decision, streamlining the final synthesis.Neutral Tone Optimization: It polishes rough, handwritten notes from hearing sessions into highly objective, professional, and clear legal language suitable for binding awards.Comprehensive Issue Tracking: LLMs cross-reference the final opinion draft against the initial list of disputed items to ensure every single claim raised by the parties is explicitly addressed.

Risk justification. Optional justification of your risk rating

Severe Privacy Violations: Inputting private corporate evidence, trade secrets, or sensitive witness testimony into non-secure AI models violates strict, legally binding alternative dispute resolution (ADR) confidentiality agreements.Hallucinated Legal Logic: LLMs frequently invent non-existent judicial precedents, statutory interpretations, or administrative codes to support the decision's core legal findings.Unintentional Judicial Review Exposure: Subtle flaws, contradictions, or circular reasoning introduced by an AI into a written opinion can expose a final arbitration award to being vacated by a court for manifest disregard of the law.Delegation of Core Duty: Over-reliance on an LLM to formulate the analytical rationale risks substituting genuine human deliberation and neutral conscience with automated, algorithmic token prediction.

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Issue subpoenas or administer oaths to prepare for formal hearings.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Template Automation: LLMs instantly generate standard subpoena templates, insert specific witness information, and organize evidence production schedules, saving clerical prep time.Verbatim Customization: The system accurately formats required statutory text or specialized institutional rules (like AAA or JAMS rules) for administering formal oaths.Information Extraction: It rapidly pulls exact witness identities, addresses, and document categories from unstructured party requests to populate formal legal forms.Explanatory Guide Creation: LLMs quickly write plain-language compliance guides to accompany subpoenas, helping non-parties understand their legal obligations.

Risk justification. Optional justification of your risk rating

Scope Overreach: If left unchecked, the AI may draft overly broad document demands that invite immediate objections or motions to quash from recipients.Hallucinated Subpoena Authority: LLMs can cite incorrect or outdated arbitration statutes or rules regarding a private neutral's actual legal power to compel non-party evidence.Confidentiality Infractions: Uploading unredacted case files or protected witness names into a generic AI tool can violate strict non-disclosure rules or protective orders.Defective Verbiage: Minor AI errors or omissions in customized oath scripts for complex scenarios (like remote or non-English speaking witnesses) can challenge the validity of later testimony.

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Prepare settlement agreements for disputants to sign.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0

- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Customised Boilerplate Generation: LLMs instantly assemble standard legal clauses (such as confidentiality, mutual releases, and integration provisions), cutting down drafting time from hours to minutes.Handwritten Note Synthesis: The system rapidly parses informal, bulleted terms agreed upon by disputants during intense sessions and translates them into formal legal provisions.Structured Payment and Performance Schedules: It automatically formats complex escrow, installment, or performance timelines, minimizing mathematical and structural drafting errors.Multi-Format Adaptation: LLMs quickly reformat a single core agreement into specialized closing documents, including stipulated dismissals, consent judgments, or withdrawal forms.

Risk justification. Optional justification of your risk rating

Enforceability Flaws: AI systems can use generic language that inadvertently fails to meet localized statutory demands or state-specific execution requirements, risking the agreement's validity.Confidentiality Infractions: Inputting the raw terms of a private mediation or proprietary corporate dispute into standard LLM engines creates massive exposure and breaches non-disclosure mandates.Ambiguous Escape Latches: Subtle phrasing choices generated by an LLM might create unintended ambiguities or legal loopholes, inviting future litigation over the interpretation of the settlement text.Omission of Critical Deadlines: An AI model can inadvertently leave out essential boilerplate protections, such as choice of law, specific dispute-resolution triggers for breaches, or clear operational deadlines.

Q7. **Occupation:**
Judges, Magistrate Judges, and Magistrates

Task:
Supervise other judges, court officers, and the court's administrative staff.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3

- (●) 4
- ( ) 5

Reward Justification. Optional justification of your reward rating

Administrative Policy Drafting: LLMs quickly generate or update court internal operating procedures, employee handbooks, and standard onboarding materials for administrative staff.Workload and Schedule Management: The system optimizes judicial and staff calendars by analyzing case backlogs and drafting efficient personnel allocation frameworks.Performance Review Assistance: It helps draft initial performance evaluations, commendation letters, or constructive feedback memos from rough bullet points provided by the supervising judge.Streamlined Training Generation: LLMs rapidly create clear educational summaries and compliance training outlines regarding changes to internal courthouse policies or state ethical guidelines.

Risk justification. Optional justification of your risk rating

Exposing Courthouse Data: Processing internal personnel disputes, disciplinary files, or administrative complaints through public LLMs violates employment privacy laws and court security protocols.Algorithmic Management Bias: Relying on AI metrics to evaluate staff performance or assign caseloads can perpetuate hidden biases, damaging workplace morale and court fairness.Flawed Policy Compliance: LLMs can invent non-existent labor laws or cite outdated civil service regulations when drafting internal courthouse employment policies.Erosion of Human Authority: Automated administrative oversight reduces the essential leadership, empathy, and personal trust required to manage a sensitive public judicial institution.

Q7. **Occupation:**
Judicial Law Clerks

Task:
Perform courtroom duties, including calling calendars, administering oaths, and swearing in jury panels and witnesses.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ( ) 0
- ( ) 1
- (●) 2
- ( ) 3
- ( ) 4
- ( ) 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ( ) 0
- ( ) 1
- ( ) 2
- ( ) 3
- (●) 4
- ( ) 5

Reward Justification. Optional justification of your reward rating

Pre-Session Scripting: LLMs quickly generate customized script templates for calling calendars, swearing in unique witness configurations, or administering non-traditional oaths.Docket Sequence Summarization: The system can parse complicated daily court dockets to group case types or status hearings, helping the clerk structure the morning calendar call more logically.Multilingual Script Preparation: It rapidly translates standard jury or witness oaths into phonetic guides or multiple languages for the clerk to review or utilize for diverse court participants.Instructional Handout Creation: LLMs quickly draft plain-language orientation summaries that clerks can distribute to freshly empanelled jury members explaining standard courtroom conduct.

Risk justification. Optional justification of your risk rating

Real-Time Operational Failure: LLMs are static text models and cannot actively manage live, dynamic, or fast-paced courtroom disruptions during a live calendar call.Jurisdictional Oath Invalidation: If an LLM-generated script subtly alters statutory verbiage required for a witness or jury oath, it can technically compromise the validity of the entire legal proceeding.Inadvertent Public Exposure: Generating custom calendar scripts or witness checklists by inputting sensitive, sealed, or juvenile case records into commercial AI systems violates strict judicial privacy rules.Acoustic and Behavioral Blindness: AI software cannot perceive live courtroom environmental cues, individual distress, or vocal hesitation that a law clerk must observe when a witness or juror is taking an oath

Q7. **Occupation:**
Judicial Law Clerks

Task:
Attend court sessions to hear oral arguments or record necessary case information.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Instant Argument Summarization: LLMs quickly distill lengthy, unstructured live-audio transcripts or rough clerk notes into structured summaries of each party's core legal arguments.Key Issue Isolation: The system rapidly extracts critical case details mentioned during hearings, such as specific exhibits, dynamic concessions, and key case law citations, organizing them into a central reference document.Drafting Assistance for Bench Memos: It accelerates the creation of post-hearing synthesis memos by organizing the oral arguments directly alongside the relevant pre-hearing briefs.Action-Item and Deadline Extraction: LLMs instantly identify and compile administrative orders, evidentiary deadlines, or follow-up tasks issued by the judge during the session

Risk justification. Optional justification of your risk rating

Critical Context Blindness: LLMs lack real-time situational awareness and can easily miss non-verbal cues, tone shifts, or judicial expressions that signal how a judge or advocate views an argument.Acoustic and Hallucination Faults: In court sessions with poor audio quality or overlapping speakers, an LLM processing a transcript can misattribute statements, drop crucial "not" modifiers, or hallucinate entirely incorrect concessions.Strict Confidentiality Breaches: Uploading live hearing recordings, unredacted transcripts, or a judge's private, contemporaneous notes into commercial AI networks violates strict court security protocols and judicial privilege rules.Distorted Objective Recording: Relying heavily on AI summaries to document a hearing introduces systemic algorithmic filtration, which can inadvertently downplay subtle but legally determinative arguments

Q7. **Occupation:**
Judicial Law Clerks

Task:
Prepare briefs, legal memoranda, or statements of issues involved in cases, including appropriate suggestions or recommendations.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1

- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

Massive Synthesis Speed: LLMs quickly compress voluminous trial records, motion papers, and discovery transcripts into structured case summaries.Rapid Issue Extraction: The system can analyze messy opposing briefs to instantly isolate overlapping and conflicting legal arguments.Drafting Acceleration: It reduces manual clerical workloads by instantly generating baseline structural frameworks for bench memos and statement of issues.Comparative Precedent Retrieval: LLMs can quickly cross-reference statutory elements against vast case databases to pull relevant matching holdings.

Risk justification. Optional justification of your risk rating

Hallucinated Precedent Risk: LLMs routinely fabricate completely fake judicial citations, opinions, and statutory rules that appear entirely authentic.Compromised Judicial Independence: Over-reliance on AI-generated recommendations risks substituting the court's neutral human conscience with generic algorithmic probability.Strict Confidentiality Breaches: Uploading unredacted case files, sealed juvenile data, or a judge's confidential notes into commercial AI networks violates strict security protocols.Subtle Logic Disconnects: AI struggles with complex, multi-layered statutory analysis, frequently inserting flawed reasoning that can misguide a judge's final decision.

Q7. **Occupation:**
Judicial Law Clerks

Task:
Research laws, court decisions, documents, opinions, briefs, or other information related to cases before the court.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

Slashes Scanning Time: Legal clerks spend hours reading hundreds of pages of briefs and case law. LLMs compress this by summarizing long filings and surfacing key arguments in seconds.Accelerates Cross-Referencing: LLMs excel at finding conceptual connections across massive datasets. They can instantly flag matching legal doctrines or conflicting arguments across different documents.Streamlines First Drafts: Clerks write extensive bench memos and opinion drafts. An LLM acts as an advanced typing assistant that structures outlines, builds standard boilerplate text, and refines prose.Why Not a 5? LLMs cannot perform the actual final legal reasoning or make subjective normative judgments required for judicial decision-making.

Risk justification. Optional justification of your risk rating

Severe Hallucination Hazards: LLMs frequently invent entirely fictitious case names, docket numbers, and judicial quotes that look completely authentic.Context Blindness: AI models often miss subtle jurisdictional differences, whether a case is binding or persuasive, or if a critical precedent has been quietly overturned or distinguished.Confidentiality Breaches: Inputting non-public case details, sealed documents, or sensitive draft opinions into public or unencrypted LLM servers violates strict judicial ethics and privacy laws.Why Not a 5? The prompt specifies collaboration with a human expert. A trained law clerk acts as a strict human-in-the-loop buffer, systematically verifying every citation and neutralizing catastrophic errors before they reach a judge.

Q7. **Occupation:**
Lawyers

Task:
Examine legal data to determine advisability of defending or prosecuting lawsuit.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

Data Sifting: LLMs instantly isolate hot documents and timelines across thousands of discovery pages.Precedent Analytics: They quickly cross-reference past verdicts and settlement ranges to estimate odds of success.Cost Efficiency: AI screening compresses weeks of billable preliminary research into days, saving client money.The Limit (Why Not 5): AI cannot judge human elements like witness charisma, jury emotion, or a client's risk tolerance

Risk justification. Optional justification of your risk rating

Malpractice Exposure: Missing a hidden document or trusting a fake precedent can lead to a disastrous litigation strategy.Privilege Waiver: Uploading unfiled case details into unsecure AI models can destroy attorney-client privilege.Flawed Inputs: If initial client files are incomplete, the LLM will generate confident but fundamentally wrong advice.The Buffer (Why Not 5): A seasoned attorney acts as the ultimate filter, verifying the data against real-world experience before filing.

Q7. **Occupation:**
Lawyers

Task:
Evaluate findings and develop strategies and arguments in preparation for presentation of cases.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Hyper-Speed Synthesis: Legal preparation requires sorting through thousands of pages of discovery, depositions, and exhibits. LLMs extract key timelines and connect disparate facts in seconds, a task that takes human experts days.Simulated Adversary: LLMs can actively adopt the persona of opposing counsel to spot vulnerabilities in proposed strategies and simulate courtroom counter-arguments.Drafting Scale: The technology rapidly generates initial outlines, trial briefs, and opening statement structures, allowing the lawyer to shift from writing to high-level editing.

Risk justification. Optional justification of your risk rating

Authority Bias: LLM outputs sound highly professional and persuasive, making it easy for a busy expert to overlook deep-seated logical flaws or fabricated legal precedents.Ethical and Privilege Violations: Uploading non-public case findings into commercial models can breach attorney-client privilege and data privacy laws, leading to severe sanctions.Flawed Strategic Logic: Law relies on subtle human intuition, empathy, and predicting a judge or jury’s emotional response—critical dimensions that LLMs completely lack

Q7. **Occupation:**
Lawyers

Task:
Negotiate contractual agreements.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Playbook-Driven Speed: LLMs compare draft contracts against predefined corporate playbooks instantly, identifying missing clauses or unapproved deviations in seconds rather than hours.Rapid Leverage Identification: The system quickly surfaces unfavorable asymmetric language (e.g., hidden indemnification imbalances or strict termination terms) embedded deep within vendor boilerplate text.Dynamic Compromise Drafting: When negotiations stall, an LLM can generate multiple alternative, middle-ground phrasing options that preserve the core commercial intent while satisfying both parties.

Risk justification. Optional justification of your risk rating

Interdependent Term Blindness: Models evaluate text locally and can miss how a subtle change in a "Definitions" section fundamentally alters the legal liability of a separate "Limitation of Liability" clause.Lack of Commercial Context: An LLM does not understand a client's risk tolerance, strategic business relationships, or operational realities, leading to rigid positions that can derail a deal.Drafting Hallucinations: AI engines occasionally introduce ambiguous or legally non-binding vocabulary during clause generation, creating future litigation vulnerabilities that are easy for a tired human eye to miss.

Q7. **Occupation:**
Lawyers

Task:
Study Constitution, statutes, decisions, regulations, and ordinances of quasi-judicial bodies to determine ramifications for cases.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

Complex Hierarchy Processing: LLMs excel at quickly identifying how a local ordinance interacts with state statutes and federal constitutional law, mapping out the multi-tiered legal hierarchies that govern a case.Obscure Agency Discovery: Quasi-judicial bodies (e.g., environmental boards, labor tribunals) publish fragmented, hard-to-search rulings. LLMs can quickly parse these niche administrative archives to find relevant regulatory guidance.Semantic Search Efficiency: Instead of relying on rigid keyword matches, LLMs use conceptual understanding to find analogous regulations or decisions that use different terminology but address identical legal issues.

Risk justification. Optional justification of your risk rating

Severe Judicial Sanctions: Courts have repeatedly penalized lawyers for submitting briefs containing AI-fabricated case citations. In statutory research, inventing a clause or a precedent is a catastrophic ethical and professional failure.The "Currentness" Trap: Statutory and constitutional laws are highly dynamic. LLMs often lack real-time access to the exact, effective date of an amended statute, leading them to apply outdated law to current facts.Textual Misinterpretation: Legal ramifications often turn entirely on a single word or punctuation mark (e.g., a comma or the word "shall" versus "may"). LLMs struggle with this level of rigid textualism, frequently misinterpreting the actual boundaries of a regulatory mandate.

Q7. **Occupation:**
Paralegals and Legal Assistants

Task:
Arbitrate disputes between parties and assist in the real estate closing process, such as by reviewing title searches.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Rapid Discrepancy Detection: During real estate closings, LLMs excel at cross-referencing massive closing packages, automatically flagging inconsistencies in names, dates, parcel numbers, and loan terms across deeds, mortgages, and closing disclosures.Streamlined Chain-of-Title Mapping: LLMs can quickly parse historical title abstracts, organizing confusing sequences of deeds, probates, and foreclosures into a clear chronological timeline to help identify potential breaks in ownership.Structuring Resolution Language: For dispute resolution, LLMs can instantly generate multiple neutral, balanced settlement phrasing options based on standard mediation clauses, saving hours of manual drafting.

Risk justification. Optional justification of your risk rating

Hyper-Specific Property Discrepancies: A single digit error in a long legal metes-and-bounds property description can completely invalidate a conveyance. LLMs often gloss over these dense alphanumeric strings, missing critical drafting errors.Hidden Lien & Easement Blindspots: Missing a municipal tax lien, a mechanics lien, or a utility easement recorded in local county archives can lead to immediate title insurance claims and lawsuits; LLMs lack the hyper-local context to verify if these obscure records are valid.The Supervision Gap (UPL): Because paralegals and assistants cannot provide independent legal counsel or issue final arbitration rulings, an over-reliance on LLM-generated summaries without an attorney's strict, line-by-line verification can lead to the accidental Unauthorized Practice of Law (UPL).

Q7. **Occupation:**
Paralegals and Legal Assistants

Task:
Appraise and inventory real and personal property for estate planning.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2

- (●) 3
- ( ) 4

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ( ) 0
- ( ) 1
- ( ) 2
- (●) 3
- ( ) 4
- ( ) 5

Reward Justification. Optional justification of your reward rating

Bulk Data Structuring: Paralegals often receive messy, unorganized piles of bank statements, property deeds, and handwritten lists from clients. LLMs excel at parsing this unstructured data and organizing it into neat, categorized asset schedules.Drafting Descriptive Inventories: The system can quickly generate detailed, formal descriptions of personal property (e.g., jewelry collections, vehicles, household items) using standardized estate planning terminology, saving hours of manual data entry.Initial Comp Compilation: For real estate or standard vehicles, an LLM can rapidly pull and summarize public historical sales data and regional market trends to provide a baseline valuation starting point.

Risk justification. Optional justification of your risk rating

Physical Blindspots: LLMs cannot inspect the actual condition of physical assets. An LLM might value an antique instrument or a piece of machinery based on general data, completely missing wear-and-tear or damage that drastically slashes its real worth.Niche & Volatile Asset Mispricing: General-purpose models struggle to accurately price specialized personal property like fine art, rare collectibles, private corporate shares, or cryptocurrency, frequently generating outdated or completely hallucinated valuations.Strict Tax & Exemption Boundaries: Estate inventories must align perfectly with current, complex federal and state estate tax thresholds and step-up in basis rules. Missing a technical valuation rule can expose the client's estate to massive, unnecessary tax liabilities or audits.

Q7. **Occupation:**
Title Examiners, Abstractors, and Searchers

Task:
Prepare and issue title commitments and title insurance policies, based on information compiled from title searches.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ( ) 0
- ( ) 1
- ( ) 2
- ( ) 3
- (●) 4

- ○ 5

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ○ 4
- ◉ 5

Reward Justification. Optional justification of your reward rating

Standardized Document Synthesis: Converting raw title search abstracts into formal title commitments requires repetitive, structured text entry. LLMs excel at mapping search data directly into standardized Schedule A (legal descriptions, vestees) and Schedule B (requirements, exceptions) formats, saving significant manual labor.Rapid Multi-Document Cross-Referencing: A single search can pull dozens of deeds, deeds of trust, and releases. LLMs can instantly match old mortgage recordings with corresponding satisfaction documents to confirm which liens have been legally cleared and which remain open.Efficient Boilerplate Application: Title examiners spend hours writing routine language for standard exceptions (e.g., standard utility easements or subdivision restrictions). An LLM can instantly recognize these common encumbrances and draft the precise, pre-approved underwriting language needed for the policy.

Risk justification. Optional justification of your risk rating

Catastrophic Financial Payouts: Unlike other professional fields where an error results in a re-draft, title insurance involves immediate financial indemnity. If an LLM misinterprets an unreleased $500,000 mortgage or a federal tax lien as "cleared," the title company is strictly liable for paying off that debt.Critical Alphanumeric Weaknesses: Property descriptions rely on precise metes-and-bounds coordinates (e.g., "North 45 degrees, 22 minutes, 10 seconds East"). LLMs frequently misread or mistranslate these exact numbers and directions during processing, which can lead to insuring completely incorrect boundaries or parcels.Hyper-Local Underwriting Compliance: Title standards change at the county level based on local recording customs, regional court rulings, and specific state underwriter bulletins. LLMs operate on generalized training datasets and lack the real-time, localized awareness required to spot when a specific regional variance demands a custom, non-standard exception.

Q7. **Occupation:**
Title Examiners, Abstractors, and Searchers

Task:
Verify accuracy and completeness of land-related documents accepted for registration, preparing rejection notices when documents are not acceptable.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Pre-Screening Efficiency: Instantly checks land-related documents (deeds, mortgages, easements) for mandatory elements like notary seals, signatures, witness lines, and complete parcel ID numbers.Automated Rejection Drafting: When a document fails validation, the LLM can instantly map the error to the correct statutory recording standard and draft a precise, professional rejection notice detailing the exact remedies needed.Queue Triage: Drastically cuts processing backlogs at county recorder or title offices by filtering out obviously deficient documents, allowing human experts to focus only on complex legal determinations.

Risk justification. Optional justification of your risk rating

Hyper-Local Statutory Traps: Document recording requirements vary drastically by county and state (e.g., specific margin widths, font sizes, or tax affidavit attachments). LLMs often default to generalized rules, missing hyper-local recording ordinances.False Positives/Negatives on Custom Text: If a deed contains non-standard or creatively drafted legal language to resolve a boundary dispute, an LLM may flag it as an error or, conversely, overlook a subtle structural defect that invalidates the entire instrument.Operational Friction from False Rejections: Out-of-the-box LLMs can be overly rigid with variable formatting. Generating erroneous rejection notices creates severe operational delays, frustrates clients, and can cause missed recording deadlines that disrupt property closings.

Q7. **Occupation:**
Title Examiners, Abstractors, and Searchers

Task:
Retrieve and examine real estate closing files for accuracy and to ensure that information included is recorded and executed according to regulations.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Complex Multi-Document Cross-Referencing: A real estate closing file contains dozens of interdependent documents. LLMs excel at cross-matching critical metadata—ensuring that the borrower names, loan amounts, parcel numbers, and interest rates match exactly across the Deed, Note, Mortgage, Title Commitment, and Closing Disclosure.Automated Regulatory Timeline Auditing: Federal and state regulations impose strict time windows on closing disclosures (such as the TRID 3-day rule). An LLM can instantly analyze document metadata and e-signature timestamps to verify absolute compliance with these statutory waiting periods.Post-Closing Ledger Reconciliation: LLMs can quickly parse the numbers within an escrow or settlement statement and cross-verify them against bank wire confirmations and invoices, immediately flagging math errors, unapproved fee changes, or uncollected transfer taxes.

Risk justification. Optional justification of your risk rating

Corporate and Trust Authority Blindspots: If a property is sold by an LLC, trust, or estate, the person signing must possess specific, verified legal authority. LLMs look at text completion and often accept a signature block at face value, completely failing to verify if the underlying corporate resolutions or power of attorney forms are legally valid.Hyper-Local Compliance Traps: Closing files must satisfy highly variable state and county laws, such as specific local transfer tax calculations, mandatory homestead disclosures, or local electronic recording (e-recording) formatting rules. A general LLM will overlook these hyper-localized regulatory nuances.Forensic Fraud Vulnerabilities: Modern real estate fraud frequently involves sophisticated document alterations, forged notary stamps, or cleverly masked identity mismatches across files. LLMs evaluate text strings rather than forensic document integrity or visual anomalies, creating a high risk of rubber-stamping a fraudulent transaction file.

Q7. **Occupation:**
Administrative Law Judges, Adjudicators, and Hearing Officers

Task:
Explain to claimants how they can appeal rulings that go against them.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0

- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Massive Administrative Relief: Explaining appeal procedures is a highly repetitive task that consumes vast amounts of institutional time. LLMs can instantly generate customized, step-by-step instruction sheets tailored to specific decision types.Plain Language Conversion: Legal rulings and appellate procedures are dense and intimidating. LLMs excel at translating complex statutory jargon into clear, universally accessible language that claimants can easily comprehend.Multi-Lingual Scaling: Instantly translates appellate guides into dozens of languages, ensuring non-native speakers understand their rights without requiring immediate, costly human translation services.

Risk justification. Optional justification of your risk rating

Strict Jurisdictional Deadlines: Appeal windows are absolute (e.g., "must file within 14 business days"). If an LLM miscalculates a deadline or references an incorrect statutory timeline, a claimant could permanently lose their right to appeal, causing an immediate due process violation.The "Legal Advice" Boundary: Hearing officers must remain strictly neutral and cannot provide legal counsel. If an LLM shifts from explaining how to appeal to advising what arguments to write, it violates judicial ethics and compromises the agency's neutrality.Procedural Hallucinations: Administrative agencies have unique, hyper-specific filing rules (e.g., specific online portals, required form numbers, physical copy counts). General-purpose LLMs are prone to hallucinating or flattening these idiosyncratic procedural steps.

Q7. **Occupation:**
Administrative Law Judges, Adjudicators, and Hearing Officers

Task:
Schedule hearings.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3

- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Administrative Bottleneck Elimination: Scheduling is one of the most time-consuming, non-adjudicative tasks in a tribunal. Shifting the logistics of calendar management to an LLM saves hundreds of staff hours per month.Dynamic Rescheduling Handling: When a conflict arises, an LLM can instantly cross-reference the calendar, find the next available opening, and simultaneously notify all involved parties while drafting the amended order.Communication Personalization: The system can quickly translate scheduling logistics and instructions (e.g., how to log into a remote video hearing platform) into plain language or different languages for self-represented claimants.

Risk justification. Optional justification of your risk rating

Mathematical and Holiday Blindspots: LLMs can occasionally miscount days or overlook local, state, or federal court closures, leading to hearings being scheduled on invalid dates or outside statutory windows.Inflexible Resource Allocation: A human scheduler knows that certain attorneys always run late, or that specific types of cases regularly settle before the hearing. An LLM operates purely on data inputs and lacks the operational intuition to adjust scheduling buffers.Data Integration Friction: If the LLM is not perfectly integrated with the agency's core docketing software, it can create sync errors, leading to double-booked courtrooms or unnotified parties.

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Conduct studies of appeals procedures to ensure adherence to legal requirements or to facilitate disposition of cases.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ○ 3
- ◉ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Accelerated Data Harmonization: Operational studies require analyzing disparate procedural guides from multiple alternative dispute resolution (ADR) organizations. LLMs synthesize these unstructured manuals into uniform datasets in minutes.Automated Trend Mapping: LLMs quickly detect systemic compliance vulnerabilities, such as a repeating pattern of appeals being dismissed for a specific technical error, showing exactly where public instructions are failing.Drafting Operational Guidelines: Once systemic issues are located, the system rapidly drafts structured operational guides, flowcharts, and policy suggestions to streamline the disposition of stale cases.

Risk justification. Optional justification of your risk rating

The Static Knowledge Trap: Private arbitration bodies (such as AAA, JAMS, or FINRA) frequently update their specific procedural rules and fee schedules. An LLM using outdated training data will generate flawed comparative studies.Flattening of Local Legal Lexicons: A minor terminology variance between different municipal codes or private rules can fundamentally alter how an appeal must be filed. LLMs tend to over-generalize, missing these fatal terminological traps.Due Process Blindspots: Ensuring "adherence to legal requirements" on appeal requires deep evaluation of constitutional due process rights. LLMs evaluate semantic structures rather than the legal spirit of equity and fairness, risking structurally flawed advice.

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Conduct initial meetings with disputants to outline the arbitration process, settle procedural matters, such as fees, or determine details, such as witness numbers or time requirements.

Rewards. Provide a **reward** rating (time or monetary savings) of using LLM Systems for this task in collaboration with a human expert

- ○ 0

Risks. Provide a **risk** rating of using LLM Systems for this task in collaboration with a human expert

- ○ 0
- ○ 1
- ○ 2
- ◉ 3
- ○ 4
- ○ 5

Reward Justification. Optional justification of your reward rating

Elimination of Administrative Drudgery: Arbitrators spend significant, non-billable time setting up foundational parameters. Shifting the generation of standard fee disclosures and onboarding scripts to an LLM removes an administrative bottleneck.Immediate Post-Meeting Synthesis: Rather than waiting days to issue a scheduling order, a human expert can feed rough, raw meeting agreements into an LLM to produce an accurate, formatted legal order in a matter of seconds.Dynamic Parameter Modeling: If parties disagree on time allocations, an LLM can rapidly present multiple mathematical scheduling options (e.g., balancing total hearing days against witness counts) to find a swift compromise.

Risk justification. Optional justification of your risk rating

Confidentiality and Waiver Pitfalls: Inadvertently processing proprietary dispute details through a non-secured AI engine can waive essential arbitration privileges, exposing both the neutral party and the disputants to severe legal liability.Asymmetric Power Dynamics: In initial sessions, one party may attempt to bully the other into a fast-tracked schedule. A human expert catches this subtext, whereas an LLM blindly structures the schedule based solely on written commands, inadvertently favoring the aggressive party.Fee Structure Flaws: Flat fees, escrow requirements, and cancellation penalties vary wildly based on individual provider rules (e.g., AAA vs. JAMS). General LLMs are highly prone to hallucinating boilerplate fee policies that contradict the arbitrator's actual practice terms.

Q7. **Occupation:**
Arbitrators, Mediators, and Conciliators

Task:
Set up appointments for parties to meet for mediation.
